Project No. 01-114

Mr. Greg Holmes, Unit Chief  
Southern California Cleanup Operations Branch – Cypress Office  
Attention: Mr. Safouh Sayed, Project Manager  
Southern California Cleanup Operations Branch, Cypress  
Department of Toxic Substances Control  
5796 Corporate Avenue  
Cypress, CA 90630-4732

Ascon Landfill Site  
Interim Removal Measure Technical Memorandum

Dear Mr. Sayed:

Enclosed please find two copies of the Interim Removal Measure Technical Memorandum for the Ascon Landfill Site located in Huntington Beach, California.

Please feel free to contact me if you have any questions or comments at (714) 388-1804 or  
[tzeier@projectnavigator.com](mailto:tzeier@projectnavigator.com).

Sincerely,

Tamara Zeier, P.E.  
Ascon Landfill Site Project Coordinator

- Appendix H: Calscience Environmental Laboratories, Inc. Analytical Results
- Appendix I: PTS Laboratories Physical and Chemical Property Data
- Appendix J: PCR Mobile Laboratories In-Field Screening Data

## **1 INTRODUCTION AND BACKGROUND**

### **1.1 Preface**

This technical memorandum summarizes field data and laboratory results collected during a lagoon and soil sampling investigation conducted in January 2009 at the Ascon Landfill Site (Site) in Huntington Beach, California. The information will be used to support planning of the Interim Removal Measure (IRM) and better define specific field methods to be employed during IRM implementation. The sampling and reporting were conducted in accordance with a sampling plan titled *Technical Memorandum - Interim Removal Measure – Sampling Plan Lagoons 1 and 2* (IRM Sampling Plan), submitted to DTSC on November 5, 2008, and planned soil sampling using a CPT rig per verbal communications with DTSC in January 2009. Described in the sampling plan are procedures for sample collection and laboratory testing of tarry materials within Lagoons 1 and 2. The sampling plan was prepared by Geosyntec Consultants, Inc. (Geosyntec) under the direction of Project Navigator, Ltd. on behalf of the Ascon Landfill Site Responsible Parties (RPs). The sampling plan was prepared for submittal to the California Environmental Protection Agency, Department of Toxic Substances Control (DTSC), and was accepted by DTSC via email on November 12, 2008.

The initial sampling and testing activities for use in the IRM planning included:

- Sampling and testing of tarry materials for chemical and physical characteristics;
- Sampling and recycling feasibility testing by vendors; and
- Sampling and testing of Site soil for lead concentrations to obtain data to assist in potential future profiling of Site materials, if determined to be needed.

### **1.2 Background**

The Site is approximately 38 acres and includes five lagoons (Lagoons 1-5), one covered pit, and seven former pits that are no longer visible (**Figure 1**). Since operation of the Site began in 1938, various types of waste were accepted until the Site stopped receiving waste in 1984. The largest volume of wastes disposed at the Site consists of drilling mud and oil field wastes that have been found to be present throughout most of the Site. Additionally, chromic and sulfuric acids, aluminum slag, fuel oils, styrene, asphaltic concrete, concrete, wood, and other construction debris were reportedly

disposed at the Site. The combined thickness of soil, construction debris, and waste materials throughout most of the Site ranges from approximately 5 to 25 feet (ft).

Lagoons 1 and 2 contain viscous tarry materials and drilling muds. Investigations conducted in 2004 included sampling of the tarry materials from Lagoons 1 and 2 and limited treatability testing that included ex-situ chemical oxidation and sludge liquification. These studies are reported in the Revised Feasibility Study (RFS) (PNL, 2007).

## **2 METHODOLOGY**

### **2.1 Health and Safety**

The Site-specific Health and Safety Plan (HASP) was updated to include the scope of work outlined in the IRM Sampling Plan. The HASP addresses potential health and physical hazards at Lagoons 1 and 2, including requirements for worker protection. All personnel and subcontractors working on the Site reviewed the HASP prior to performing work activities. The HASP was included as an appendix to the October 2008 IRM Work Plan, and was updated per the DTSC-accepted RPs' responses to DTSC's December 17, 2008, comments on the November 2008 Interim Removal Measure Health and Safety Plan.

### **2.2 Lagoons 1 and 2 Probing and Sampling**

Heavy equipment operations were performed by Remedial Construction Services (RECON) of Santa Maria, California, on January 27 and 28, 2009. Prior to lagoon probing and materials sample collection, the netting covering Lagoons 1 and 2 was removed. Samples of the tarry materials were collected using a long-reach excavator.

During sampling operations, the excavator was positioned on the berms immediately surrounding the lagoons. From the berm areas, the excavator arm was extended out into the lagoons to the maximum length feasible, allowing for downward sampling. The excavator bucket was pushed down to the bottom of the tarry materials to determine the depth of material in each sampling location. Generally, the excavator was used to sample the tarry materials above the lagoon bottom. Upon refusal at the bottom of the lagoon, the approximate depth was noted, and the bucket arm was raised back up, collecting material in the bucket. The filled bucket was brought back to the berm onto an area covered in plastic sheeting. Material from the excavator bucket was screened for total volatile organic compounds (VOCs) using a photoionization detector (PID) for health and safety purposes, then if warranted based on PID results, monitored for

benzene and 1,2-dichloroethane. All results were recorded on field forms. Following health and safety monitoring, the material was collected from the excavator bucket into various sample containers for vendor treatability, recyclability, and analytical testing.

On January 27, 2009, four locations in each of Lagoons 1 and 2 were probed and then sampled with the excavator. Five additional locations in Lagoon 1 were probed. **Figure 2** shows the probe and sample locations. Samples collected in January 2009 were collected for laboratory chemical and physical analysis, and vendor treatability/recyclability evaluations. Samples for laboratory analyses were collected in 8-oz. glass jars supplied by the laboratories. Vendor samples were collected in lined 5-gallon containers or  $\frac{1}{4}$ - to 1-gallon size cans. A drum of tarry materials from each of the eight sample locations was retained for potential future analyses. Two roll-off bins containing Lagoon 1 and 2 materials were also transported to Chemical Waste Management, Inc., in Kettleman City, California, for testing. Based on individual vendor requests, treatability samples were either composited from the four locations in each lagoon, resulting in one composite sample from each of the two lagoons, or not composited, resulting in four individual grab samples from each lagoon. Details of the sampling containers, type and volume of material, laboratories, vendors, and analyses are included in **Table 1**. Vendor chain-of-custody forms (COCs) and the waste manifests for the roll-off bins are included as **Appendix A**. The containers were all sealed in order to minimize any odors and potential leaks during transport.

In addition to the sampling of lagoon materials, Site soils that may potentially be used as admixtures were collected on January 28, 2009, from four locations throughout the Site and composited for vendor analysis. The soils were collected in 5-gallon buckets (**Table 1**).

The containers of both tarry materials and Site soils were transported as non-regulated material based on the small quantities and past analytical testing that indicated a non-RCRA hazardous designation of the material.

### 2.3 Lagoon 3 Probing

On January 28, 2009, ten locations in Lagoon 3 were probed along the western and northern portions of the lagoon area (**Figure 3**) upon DTSC's approval. The probing was conducted to ascertain the depths of material for future reference, and no samples were collected. The probing operations followed the same procedures outlined above.

## **2.4 Direct Push Soil Sampling**

To obtain Site soil data for potential future profiling of Site materials, twenty (20) soil borings were completed on January 29 and 30, 2009. The soil samples were tested for lead in the field, and selected samples were sent to Test America for Title 22 metals analysis. The locations of the borings are shown on **Figure 4**. The drilling was performed by Gregg Drilling of Signal Hill, California, using a track mount “rhino” drill rig. Direct push soil borings were continuously cored to a depth of 8 feet below ground surface (bgs) and sampled using a standard macro-core continuous sampling system fitted with standard core barrels and dedicated/disposable (1-¾-inch diameter by 4-foot long) acetate liners. A portion of the retained soil cores were screened with a PID for potential organic vapors and visually logged noting changes in lithology and depth of fill. Soil logging and sample collection were performed by a California Professional Geologist in general accordance with the Unified Soil Classification System (USCS).

To complete the metals analysis, sections of the soil liner approximately 8 inches in length were cut and capped with Teflon<sup>©</sup> tape and plastic caps at appropriate depth intervals. These soil core samples were then cut into a 3-inch section for in-field lead analysis by X-ray fluorescence and a 5-inch section for fixed laboratory analysis of metals. Details of the soil sampling containers, laboratories, and analyses are included in **Table 1**.

## **2.5 Additional Sampling of Lagoon Material**

Additional sampling of Lagoon 1 and 2 materials from retained drums was performed on February 27, 2009. The sampling event was performed to collect materials for additional laboratory physical properties analyses plus total VOC vapor analysis using a PID. The eight samples were collected in quart size (¼-gallon) cans and brass sleeves (**Table 1**). In addition, one sample was collected from each of Lagoons 1 and 2. These samples consisted of tarry material that flowed from the mounded lagoon materials that were surfaced during the January 2009 sampling event. Locations of these two tar samples collected in the lagoons corresponded with January 2009 sample locations L1-N/L1-E in Lagoon 1 and L2-N in Lagoon 2.

## **2.6 Laboratory Methods**

### **2.6.1 Lagoon Material Samples**

Samples collected from Lagoons 1 and 2 on January 28, 2009, were sent to Test America laboratory under proper chain-of-custody (COC) protocol for chemical and

physical analytical testing. Samples were analyzed for VOCs by EPA Method 8260B, semi-volatile organic compounds (SVOCs) by EPA Method 8270C, Title 22 metals by EPA Method 6010B, total petroleum hydrocarbon (TPH) distribution by EPA Method 8015B, organochlorine pesticides by EPA Method 8081A, and polychlorinated biphenyls by EPA Method 8082. Additional tests included paint filter tests by method SWA-846, pH by EPA Method 9045C, specific gravity by ASTM D-96, and the CCR Title 22 Fathead Minnow Screen Bioassay.

Analyses completed following receipt of metal results included the CA-Waste Extraction Test (WET) for metals whose total concentration exceeded 10 times its respective Soluble Threshold Limit Concentration (STLC) and the Toxicity Characteristic Leaching Procedure (TCLP) test for any metal whose total concentration exceeded 20 times its respective threshold.

After initial laboratory results were reviewed, replicate total lead and replicate lead TCLP/WET testing on samples L1-S and L2-E was performed by Calscience Environmental Laboratories of Garden Grove, California. Test America also conducted replicate total lead and lead TCLP analyses on these samples after Calscience completed their analyses. Replicate sample aliquots were taken from the same sample container (jar) as the primary samples.

Physical property and total VOC vapor analyses using field instrumentation were performed by PTS Laboratories on lagoon samples collected on February 27, 2009. These samples consisted of the lagoon material in the retained drums and the two samples of tarry material that was at the lagoon surface at the January 2009 sample locations. Analyses performed by PTS were pore fluid saturation by the Dean-Stark method, measurements of dynamic viscosity throughout a range of temperatures, and PID readings for total VOCs at each temperature interval. In addition to the standard viscosity readings at 70, 100, and 130 degrees Fahrenheit, additional readings at 50, 60, 80, and 90 degrees Fahrenheit were added to obtain representative material fluidity at potential ambient conditions.

## **2.6.2 Soil Samples**

Field lead testing using X-ray fluorescence methodology was performed by PCR Mobile Laboratories on 68 primary and duplicate soil samples collected at the Site between January 29 and 30, 2009. X-ray fluorescence was applied to 3-inch sections of the soil core that were cut from overall 8-inch sections of continuous core at each sampling location and depth.

Based on the mobile laboratory X-ray fluorescence results, 12 soil samples including two duplicate samples were sent to Test America for Title 22 metals by EPA Method 6010B analysis. The Title 22 metals analysis was conducted on the remaining 5-inches of the selected cores.

## **2.7 Vendor Treatability Evaluation**

Lagoon and soil samples were collected and transferred to different vendors. A list of vendors is summarized in **Table 1**. This memorandum does not present the results of the vendors' treatability/recyclability evaluations. The vendors' results will be used by the respective vendors for use in preparing a future proposal to conduct the IRM work at the Site. Vendor COCs and a waste manifest are included in **Appendix A**.

# **3 FIELD OBSERVATIONS**

## **3.1 Lagoon Probing and Sampling**

Four locations in Lagoon 1 (L1-N, L1-S, L1-E, and L1-W) were sampled and probed for depth (i.e., depth of refusal). Depths of Lagoon 1 material were 16 ft, 8 ft, 13 ft, and 16 ft, respectively (**Figure 2**). An additional 5 locations were probed in Lagoon 1 at the northeastern and northwestern corners. Measured depths of material were 0 ft-1 ft deep in the NE corner and 5 ft-12 ft deep in the NW corner.

Four locations in Lagoon 2 were sampled and probed for depth (i.e., depth of refusal) at locations L2-N, L2-S, L2-E, and L2-W. Depths of Lagoon 2 material were 13 ft, 13 ft, 16 ft, and 5 ft, respectively. The probing and sampling locations in Lagoons 1 and 2 are shown on **Figure 2**.

Lagoon 3 was probed at 10 locations in its southwestern, western, and northern portions to ascertain the depths of material for future reference. Depths of Lagoon 3 material ranged from 3 ft to 4 ft in the SW corner, 3 ft to 6 ft in the western portion, and 2 ft to 3 ft in the northern portion. Lagoon 3 probing locations are shown on **Figure 3**. Photographs of the probing and sampling of Lagoons 1, 2, and 3 are included as **Appendix B**.

During the probing and sampling of the Site lagoons, air monitoring was performed to ensure worker and public safety. Documents of health and safety forms, air monitoring logs, instrument calibration logs, and Site visitor records are included as **Appendices C through E**.

### **3.2 Soil Sampling for Lead Analysis**

Twenty soil borings were drilled on the Site using direct push technology. Three soil samples were collected from each boring and analyzed for lead by mobile laboratory using X-ray fluorescence methodology. The locations of the borings, which were predominantly east of Lagoons 1, 2, and 3, are shown on **Figure 4**. Photographs of the drilling are included as **Appendix B** and the boring logs are included as **Appendix F**. Soils were logged as fill material generally consisting of silty sand grading to sandy silty clay with asphalt, brick, and concrete fragments present.

A PID was used during drilling as a screening tool for total VOC vapors. The VOC readings to the west of Lagoons 1, 2, and 3 were all 0 parts per million (ppm). The highest VOC reading east of Lagoons 1 and 2 was 1.9 ppm and was detected in SB-18 at 7.5 feet bgs. Readings were detected in 6 out of 9 borings located east of Lagoon 3. The PID readings in the 6 borings ranged from 0.5 to 8.5 ppm. The highest PID reading was recorded in boring SB-10 at 2.5 feet bgs.

## **4 ANALYTICAL RESULTS**

### **4.1 Lagoon Material Chemical and Physical Results**

The results of the laboratory analyses conducted by Test America, Calscience Environmental Laboratories, and PTS on Lagoons 1 and 2 material samples are summarized in **Tables 2 through 8**. Chemical analytical results are reported in the following tables:

- Table 2 – VOCs
- Table 3 – SVOCs
- Table 4 – Title 22 Metals
- Table 5 – STLC and TCLP Testing
- Table 6 – Organochlorine Pesticides
- Table 7 – TPH
- Table 8 – Polychlorinated Biphenyls

Physical and bioassay analyses were performed by Test America and PTS, and results are summarized in **Tables 9** and **10**. The laboratory reports from Test America, Calscience Laboratories, and PTS are included in **Appendices G, H, and I**, respectively. The results from the tarry material will be used to evaluate disposal and/or recycle options for the Interim Removal Measure and full-scale remedy.

#### 4.2 Soil Results

The results of the soil lead analyses conducted in the field by PCR Mobile Laboratories are reported in **Table 11a**. The results of the Title 22 metals soil analyses conducted by Test America are reported in **Table 11b**. The Test America and PCR reports are included as **Appendices G and J**, respectively.

Total Porosity = All Interconnected Pore Channels

Air Filled Porosity = Pore Channels Not Occupied by Pore Fluids

g/cc: gram per cubic centimeter

% Vb: Percent of Bulk Volume

% Pv: Percent of Pore Volume

NA: Not Analyzed

\*: Viscosity greater than method/equipment capability, unable to measure fluid viscosity or density.

\*\*: Viscosity greater than method/equipment capability; results extrapolated.

PID: Photoionization Detector

ppm: Parts per Million

# TAILGATE SAFETY MEETING

Division/Subsidiary ASCON Landfill

Facility ASCON - HB

Date 1-26-09 / 1-27-09 / 1-28 Time 0700

Job Number SB0320-40

Customer Project Navigator, Recon

Address 21641 Magnolia St.; HB, CA

Specific Location Lagoons 1 & 2

Type Work Tar Sampling

Chemicals Used \_\_\_\_\_

## SAFETY TOPICS PRESENTED

Protective Clothing / Equipment

Level D; possible level C

Chemical Hazards Benzene, 1,2-DCA, VOCs

Physical Hazards Heavy Egmt; Slip, trip, fall; Bees (biological)

Emergency Procedures Co-worker drives personnel to hospital or clinic unless emergency, then 911

Hospital / Clinic Hoag Hosp. Phone 949 764-4624 Paramedic Phone ( ) 911

Hospital Address 1 Hoag Dr., Newport Beach, CA 92863

## Instrument Calibration Log

Instrument Information					
Instrument Name: MiniRAE 2000 PID	Manufacturer: Rae Systems				
Serial Number: 110-012254	Last Service Date: 1/26/09				
Parameters: VOCs	Calibration Gas: Isobutylene Gas (100 ppm)				
Calibration Procedure: fill Tedlar bag with Isobutylene gas (100 ppm). Press <mode> and <no> on MiniRae until it enters calibration mode. Press <yes> for span-cal mode and <yes> for Isobutylene gas. Attach Tedlar bag to air intake when prompted to and allow Isobutylene to flow into PID. When PID indicates that calibration is complete, record reading.

## LABORATORY REPORT

Prepared For: Geosyntec Consultants/Project Navigator - Ascon  
2100 Main Street, Suite 150  
Huntington Beach, CA 92648  
Attention: Kevin Coffman

Project: Tar Analysis  
ASCON Landfill SB0320

Sampled: 01/28/09  
Received: 01/28/09  
Revised: 03/09/09 09:59

NELAP #01108CA California ELAP#2706 CSDLAC #10256 AZ #AZ0671 NV #CA01531

*The results listed within this Laboratory Report pertain only to the samples tested in the laboratory. The analyses contained in this report were performed in accordance with the applicable certifications as noted. All soil samples are reported on a wet weight basis unless otherwise noted in the report. This Laboratory Report is confidential and is intended for the sole use of TestAmerica and its client. This report shall not be reproduced, except in full, without written permission from TestAmerica. The Chain(s) of Custody, 3 pages, are included and are an integral part of this report.*

*This entire report was reviewed and approved for release.*

### CASE NARRATIVE

SAMPLE RECEIPT: Samples were received intact, at 3°C, on ice and with chain of custody documentation.

HOLDING TIMES: All samples were analyzed within prescribed holding times and/or in accordance with the TestAmerica Sample Acceptance Policy unless otherwise noted in the report.

The hold time for STLC Mercury on sample ISA2736-01 was past the 28 day hold time due to analyst error.

PRESERVATION: Samples requiring preservation were verified prior to sample analysis.

QA/QC CRITERIA: All analyses met method criteria, except as noted in the report with data qualifiers.

COMMENTS: No significant observations were made.

SUBCONTRACTED: Refer to the last page for specific subcontract laboratory information included in this report.

ADDITIONAL INFORMATION: This is a revised report to included added analysis and to report the reanalysis data for Specific Gravity.

This is a revised report to remove the unnecessary H flag on the STLC Mercury and to include STLC Zinc results for sample ISA2736-01 (L1-N).

## GC CALIBRATION CHECK CRITERIA

Per Method 8000B of SW-846, the percent recovery of the calibration checks for GC analyses must be within  $\pm 15\%$  from the true value for each individual compound or the average % recovery of all compounds in the calibration check solution must be within  $\pm 15\%$  recovery. Per Method 8000B, the end user is to be notified if the latter situation occurs.

The % recovery for the following individual compounds fell outside the  $\pm 15\%$  criteria, however the average % recovery of all compounds in the calibration check solution was within  $\pm 15\%$ , thus meeting the overall calibration check criteria.

Footnotes:

- 1 The calibration demonstrated a high bias for this compound. Samples were flagged to indicate a possible high bias in the result for this compound.
- 2 The calibration demonstrated a low bias for this compound. Samples were flagged to indicate a possible low bias in the result for this compound.

## DATA QUALIFIERS AND DEFINITIONS

- A-01** Sample result might be biased high due to coelution of Aroclors 1242 and 1260.
- A-01a** Sample result might be biased high due to coelution of Aroclors 1242 and 1254.
- A-01b** Sample result might be biased high due to coelution of Aroclors 1242 and 1254.
- A-01c** Sample result might be biased high due to coelution of Aroclors 1242, 1254 and 1260.
- A-01d** Sample result might be biased high due to coelution of Aroclors 1242, 1254 and 1260. The data was reprocessed in a different way as the calibration 3 peaks in the confirmation column.
- A-01e** Sample result might be biased high due to coelution of Aroclors 1242, 1254 and 1260. The data was reprocessed in a different way as the calibration 4 peaks were used in the primary column .
- B** Analyte was detected in the associated Method Blank.
- B-1** Analyte was detected in the associated method blank. Analyte concentration in the sample is greater than 10x the concentration found in the method blank.
- C-1** Calibration Verification recovery was above the method control limit for this analyte, however the average % difference for all analytes met method criteria. See Calibration Summary form.
- C-2** Calibration Verification recovery was below the method control limit for this analyte, however the average % difference for all analytes met method criteria. See Calibration Summary form.
- M1** The MS and/or MSD were above the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- M2** The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).
- MHA** Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).
- MNR** No results were reported for the MS/MSD. The sample used for the MS/MSD required dilution due to the sample matrix. Because of this, the spike compounds were diluted below the detection limit.
- RL1** Reporting limit raised due to sample matrix effects.
- RL2** Reporting limit raised due to high concentrations of hydrocarbons.
- Z3** The sample required a dilution due to the nature of the sample matrix. Because of this dilution, the surrogate spike concentration in the sample was reduced to a level where the recovery calculation does not provide useful information.
- ND** Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.
- RPD** Relative Percent Difference

## ADDITIONAL COMMENTS

### For 1,2-Diphenylhydrazine:

The result for 1,2-Diphenylhydrazine is based upon the reading of its breakdown product, Azobenzene.

### For Hydrocarbon Distribution Analyses:

The reporting limits for the individual carbon distribution ranges are derived by proportioning the individual ranges relative to the total carbon range, not to fall below the method detection limit of the total range.

### For Extractable Fuel Hydrocarbons (EFH, DRO, ORO) :

Unless otherwise noted, Extractable Fuel Hydrocarbons (EFH, DRO, ORO) are quantitated against a Diesel Fuel Standard.

CHAIN OF CUSTODY FORM

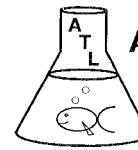

**Note:** By relinquishing samples to TestAmerica, client agrees to pay for the services requested on this chain of custody form and any additional analyses performed on this project. Payment for services is due within 30 days from the date of invoice. Sample(s) will be disposed of after 30 days.

# LABORATORY REPORT

Date: February 7, 2009

Client: TestAmerica, Irvine  
17461 Derian Ave., Suite 100  
Irvine, CA 92614  
Attn: Joseph Doak

"dedicated to providing quality aquatic toxicity testing"

4350 Transport Street, Unit 107  
Ventura, CA 93003  
(805) 650-0546 FAX (805) 650-0756  
CA DOHS ELAP Cert. No.: 1775

Laboratory No.: A-09020203-001/08  
Sample ID.: ISA2736-01/04, 06/09

**Sample Control:** The samples were received by ATL in a chilled state, with the chain of custody record attached.

Date Sampled: 01/28/09  
Date Received: 02/02/09  
Date Tested: 02/03/09 to 02/07/09

**Sample Analysis:** The following analyses were performed on your sample:

CCR Title 22 Fathead Minnow Hazardous Waste Screen Bioassay (Polisini & Miller 1988).

Attached are the test data generated from the analysis of your sample.

## Result Summary:

<u>Sample ID.</u>	<u>Results</u>
ISA2736-01	PASSED (LC50 > 750 mg/l)
ISA2736-02	PASSED (LC50 > 750 mg/l)
ISA2736-03	PASSED (LC50 > 750 mg/l)
ISA2736-04	PASSED (LC50 > 750 mg/l)
ISA2736-06	PASSED (LC50 > 750 mg/l)
ISA2736-07	PASSED (LC50 > 750 mg/l)
ISA2736-08	PASSED (LC50 > 750 mg/l)
ISA2736-09	PASSED (LC50 > 750 mg/l)

**Quality Control:** Reviewed and approved by:

**FATHEAD MINNOW HAZARDOUS WASTE  
SCREEN BIOASSAY**

Lab No.: A09020203-001

Client/ID: TA ISA2736-01E

**TEST SUMMARY**

Species: *Pimephales promelas*.

Fish length (mm): av: 28; min: 26; max: 29.

Fish weight (gm): av: 0.39; min: 0.36; max: 0.43.

Test chamber volume: 10 liters.

Temperature: 20 +/- 2°C.

Aeration: Single bubble through 30 bore tube.

Number of replicates: 2.

Dilution water: Soft reconstituted water (40 - 48 mg/l CaCO<sub>3</sub>).

QA/QC Batch No.: RT-090201.

Source: In-Lab Culture.

Regulations: CCR Title 22.

Test Protocol: California F&G/DHS 1988.

Endpoints: Survival at 96 hrs.

Test type: Static.

Feeding: None.

Number of fish per chamber: 10.

Photoperiod: 16/8 hrs light/dark.

					750 mg/l 1 /20

**RESULTS**

(the checked result applies based on fish survival rates )

<input checked="" type="checkbox"/>	PASSED	LC50 > 750 mg/l (<40% dead in 750 mg/l conc.)
<input type="checkbox"/>	FAILED	$\geq 40\%$ dead in 750 mg/l (close to passing - definitive test recommended)
<input type="checkbox"/>	FAILED	LC50 < 400 mg/l (>60% dead in 400 mg/l conc.)

**FATHEAD MINNOW HAZARDOUS WASTE  
SCREEN BIOASSAY**

Lab No.: A09020203 - C06

Client/ID: TA ISA2736-07E

**TEST SUMMARY**

Species: *Pimephales promelas*.

Fish length (mm): av: 28; min: 26; max: 29.

Fish weight (gm): av: 0.39; min: 0.36; max: 0.43.

Test chamber volume: 10 liters.

Temperature: 20 +/- 2°C.

Aeration: Single bubble through 30 bore tube.

Number of replicates: 2.

Dilution water: Soft reconstituted water (40 - 48 mg/l CaCO<sub>3</sub>).

QA/QC Batch No.: RT-090201.

Source: In-Lab Culture.

Regulations: CCR Title 22.

Test Protocol: California F&G/DHS 1988.

Endpoints: Survival at 96 hrs.

Test type: Static.

Feeding: None.

Number of fish per chamber: 10.

Photoperiod: 16/8 hrs light/dark.

## DATA QUALIFIERS AND DEFINITIONS

**M2** The MS and/or MSD were below the acceptance limits due to sample matrix interference. See Blank Spike (LCS).

**MHA** Due to high levels of analyte in the sample, the MS/MSD calculation does not provide useful spike recovery information. See Blank Spike (LCS).

**ND** Analyte NOT DETECTED at or above the reporting limit or MDL, if MDL is specified.

**RPD** Relative Percent Difference

**Client Reference: ASCON**

Dear Client:

Enclosed is an analytical report for the above-referenced project. The samples included in this report were received 4/10/2009 and analyzed in accordance with the attached chain-of-custody.

Unless otherwise noted, all analytical testing was accomplished in accordance with the guidelines established in our Quality Systems Manual, applicable standard operating procedures, and other related documentation. The original report of subcontracted analysis, if any, is provided herein, and follows the standard Calscience data package. The results in this analytical report are limited to the samples tested and any reproduction thereof must be made in its entirety.

If you have any questions regarding this report, please do not hesitate to contact the undersigned.

Sincerely,

A handwritten signature in black ink that reads "Stephen Nowak".

## Glossary of Terms and Qualifiers

Work Order Number: 09-04-1000

<u>Qualifier</u>	<u>Definition</u>
*	See applicable analysis comment.
1	Surrogate compound recovery was out of control due to a required sample dilution, therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to matrix interference. The associated LCS and/or LCSD was in control and, therefore, the sample data was reported without further clarification.
4	The MS/MSD RPD was out of control due to matrix interference. The LCS/LCSD RPD was in control and, therefore, the sample data was reported without further clarification.
5	The PDS/PDSD associated with this batch of samples was out of control due to a matrix interference effect. The associated batch LCS/LCSD was in control and, hence, the associated sample data was reported with no further corrective action required.
A	Result is the average of all dilutions, as defined by the method.
B	Analyte was present in the associated method blank.
C	Analyte presence was not confirmed on primary column.
E	Concentration exceeds the calibration range.
H	Sample received and/or analyzed past the recommended holding time.
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
ME	LCS Recovery Percentage is within LCS ME Control Limit range.
N	Nontarget Analyte.
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
U	Undetected at the laboratory method detection limit.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Re: PTS File No: 39207  
Physical Properties Data  
ASCON Landfill; SB0320

Dear Ms. Ramirez:

Please find enclosed report for Physical Properties analyses conducted upon samples received from your ASCON Landfill; SB0320 project. All analyses were performed by applicable ASTM, EPA, or API methodologies. An electronic version of the report has previously been sent to your attention via the internet. The samples are currently in storage and will be retained for thirty days past completion of testing at no charge. Please note that the samples will be returned to Geosyntec at that time. You may contact me regarding storage, disposal, or return of the samples.

PTS Laboratories appreciates the opportunity to be of service. If you have any questions or require additional information, please give me a call at (562) 347-2502.

Sincerely,  
PTS Laboratories

Michael Mark Brady, P.G.

### Laboratory Test Program Notes

Ten (10) 1-quart cans and eight (8) 1"x3" sleeves received.  
 Fluids to be returned to site.

Monitoring of off gases by laboratory technician using PID meter during viscosity testing. Estimated at one hour per sample.  
 Use sleeve samples for remolded PFS testing plugs (1" or 1.5" diameter). Samples L2-N-tar and L1-N-tar use 1-quart can material.

Note: samples also received under PTS File No. 39125 from Test America. Check with Geosyntec regarding testing or return to site.

### Program Update 3/14/09

Note: DT = Discontinue Testing  
 Unable to perform viscosity measurements on 8 of 10 samples submitted. May be able to obtain viscosity measurements on "tar" samples at 130° & 100°F, will attempt to run at lower temperatures if possible.  
 Unable to perform Pore Fluid Saturation (Dean-Stark) testing on 2 of 10 samples submitted ("tar" samples not suitable for Dean-Stark).  
 Manually monitor off gases using PID meter at 50°, 60°, 70°, 80°, 90°, 100°, and 130°
