

## Memorandum

**TO:** Eric Maher and Safouh Sayed, Department of Toxic Substances Control   **DATE:** September 30, 2010  
**CC:** Steve Howe, Project Navigator  
**FROM:** Crysta Dickson, PCR Services Corporation  
**RE:** **FENCE MONITORING FOR THE ASCON LANDFILL PROJECT SITE, CITY OF HUNTINGTON BEACH, ORANGE COUNTY, CALIFORNIA**

---

**PCR Services Corporation (PCR)** biologist Crysta Dickson conducted the weekly fence monitoring for the ASCON landfill project site on September 28, 2010. Ms. Dickson was escorted by Bill Hodges of Geosyntec.

The entire project site was driven and all fencing (both construction and chain-linked) was inspected to ensure fencing was intact and no impacts have occurred to the disturbed coastal salt marsh or southern tarplant (*Centromadia parryi* ssp. *australis*) populations to be avoided and preserved.

As documented during the September 21, 2010 monitoring visit, one 20-foot stretch of fencing along Central Road was noted as being damaged. The area was inspected again during PCR's September 28, 2010 monitoring visit. All damages had been repaired and no impacts to tarplant were observed as result of the repairs.
