Onsite Dust Monitoring

9/01/2023 - 9/30/2023

Net dust represents the dust that may be leaving the Site. This is determined by subtracting upwind data (dust blowing onto the Site from other sources) from downwind data. This helps us monitor that dust control actions are effective.

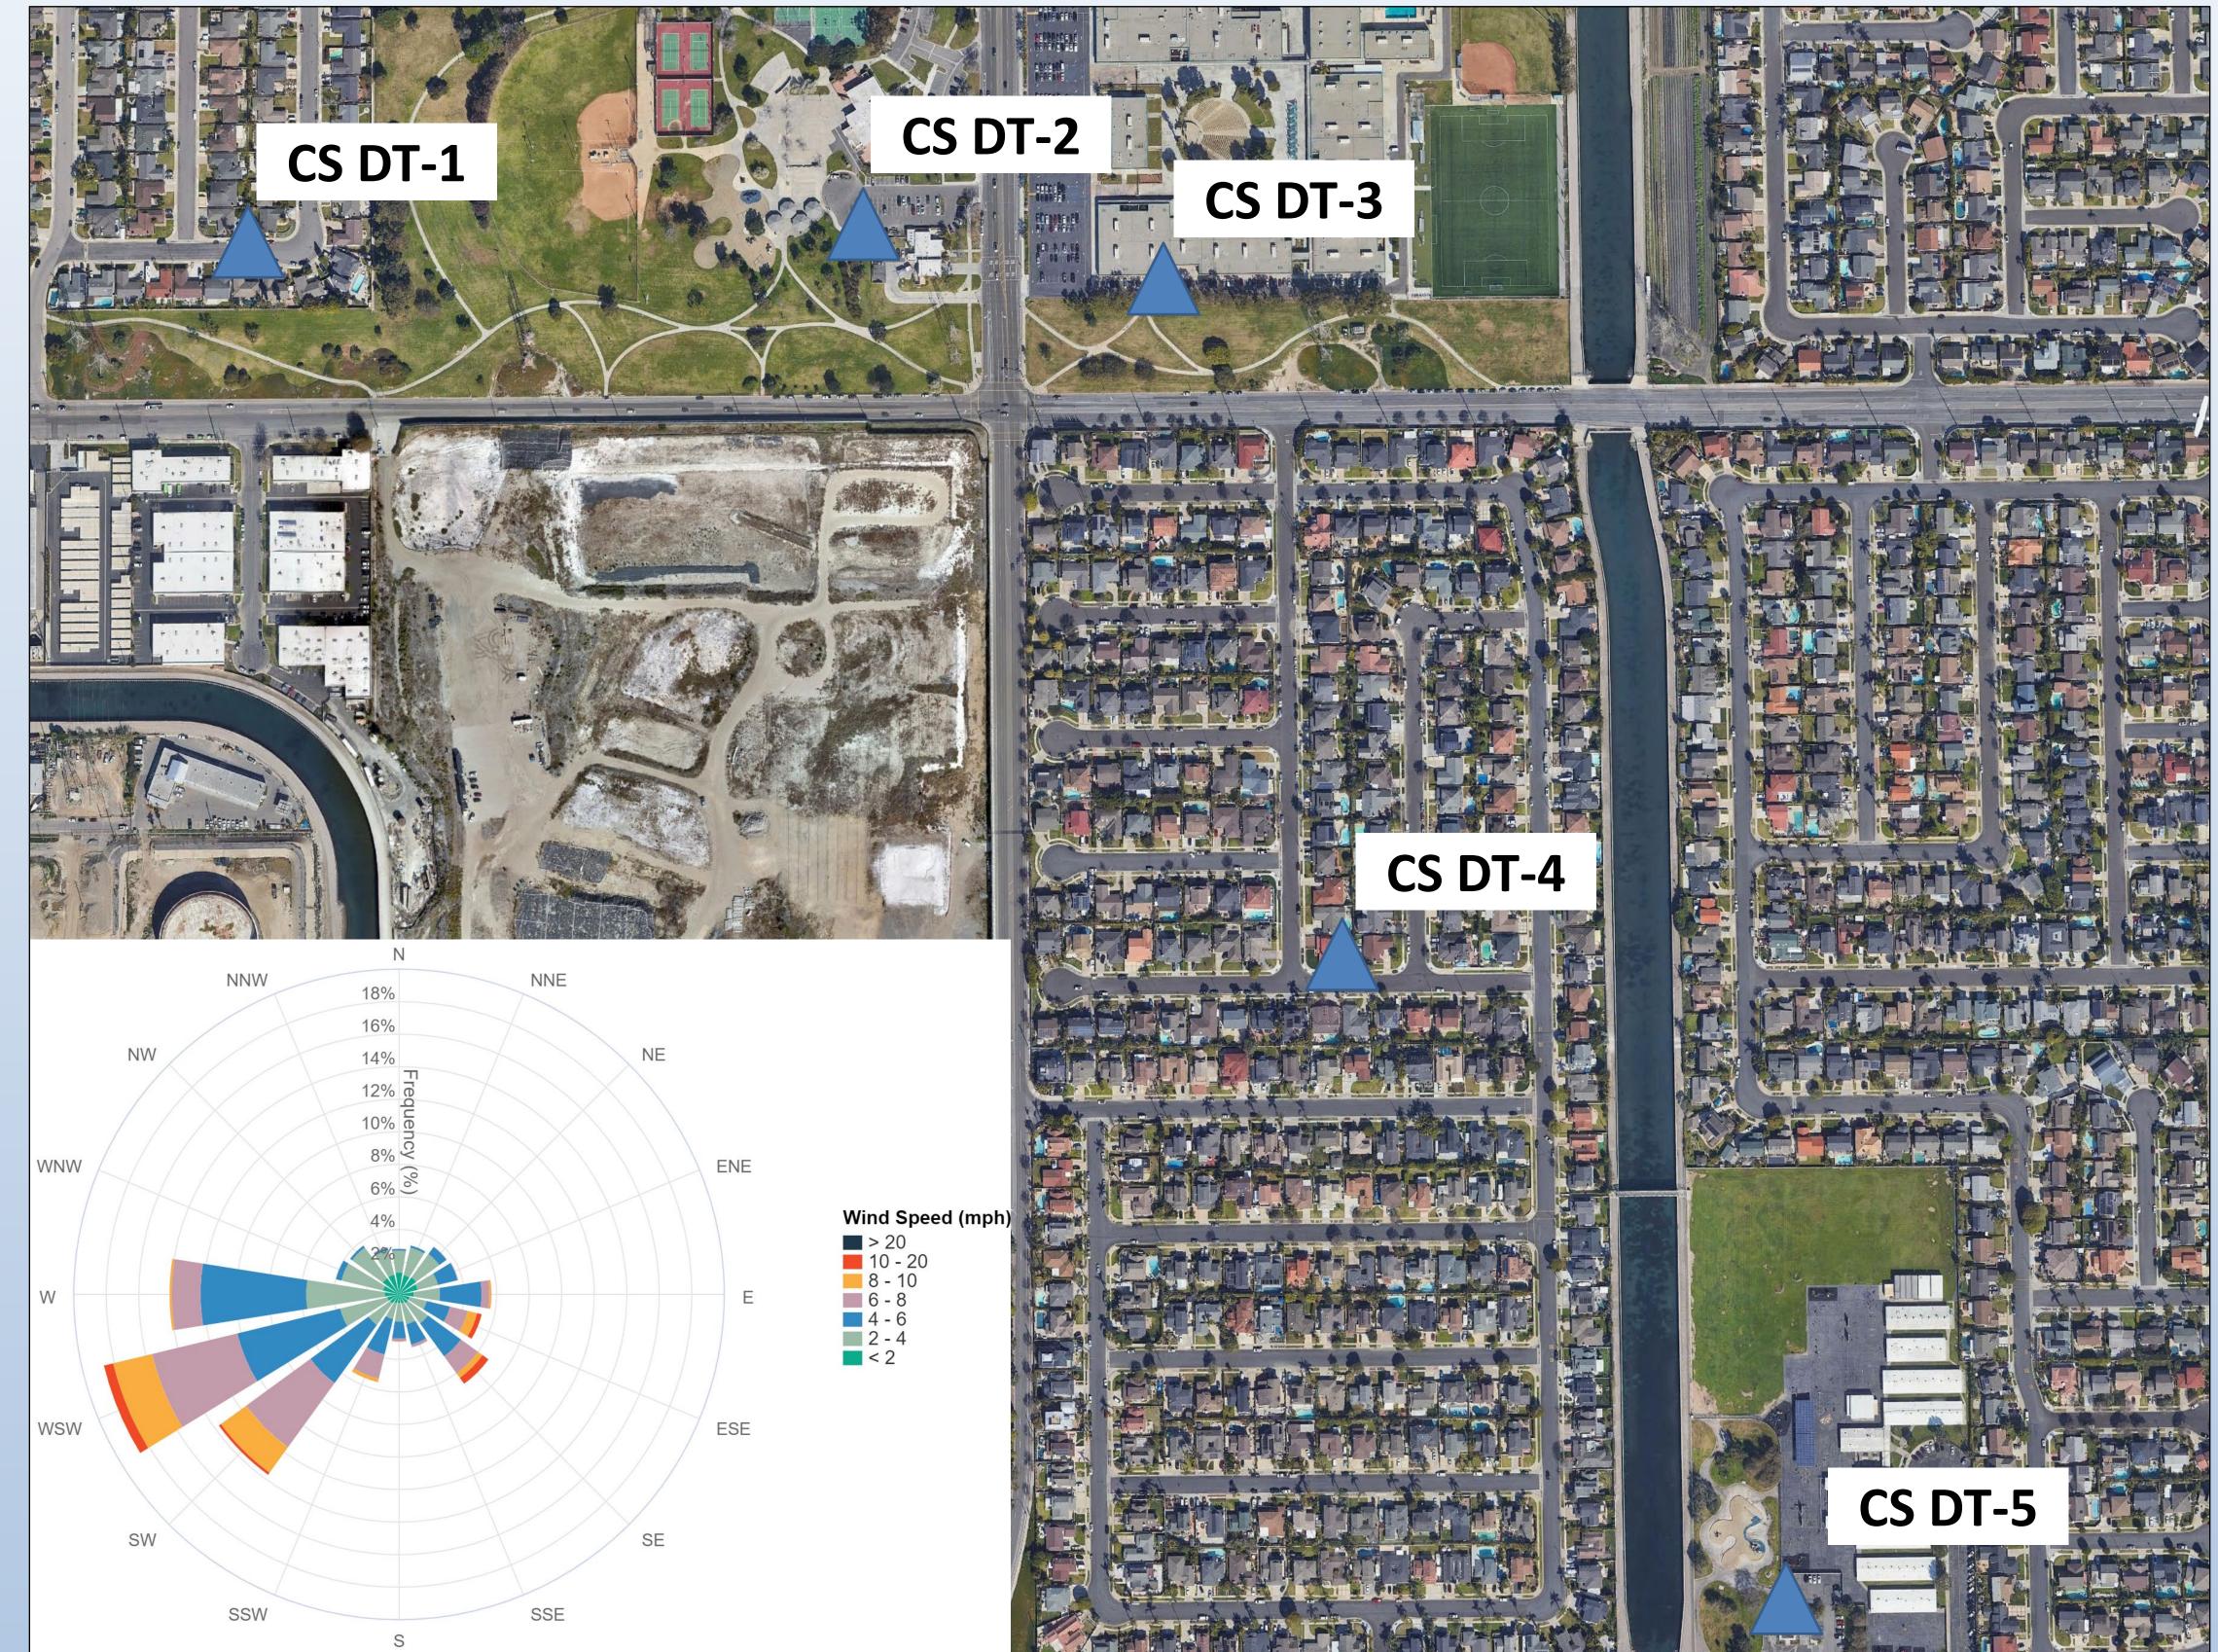

Individual Offsite Stations: 24-Hr Average Dust Readings (μg/m³) CS DT-1 CS DT-2 CS DT-3 917 913 915 917 919 917 9173 9175 9177 9173 9175 9177 9173 9175 9177 9179 CS DT-4 CS DT-5

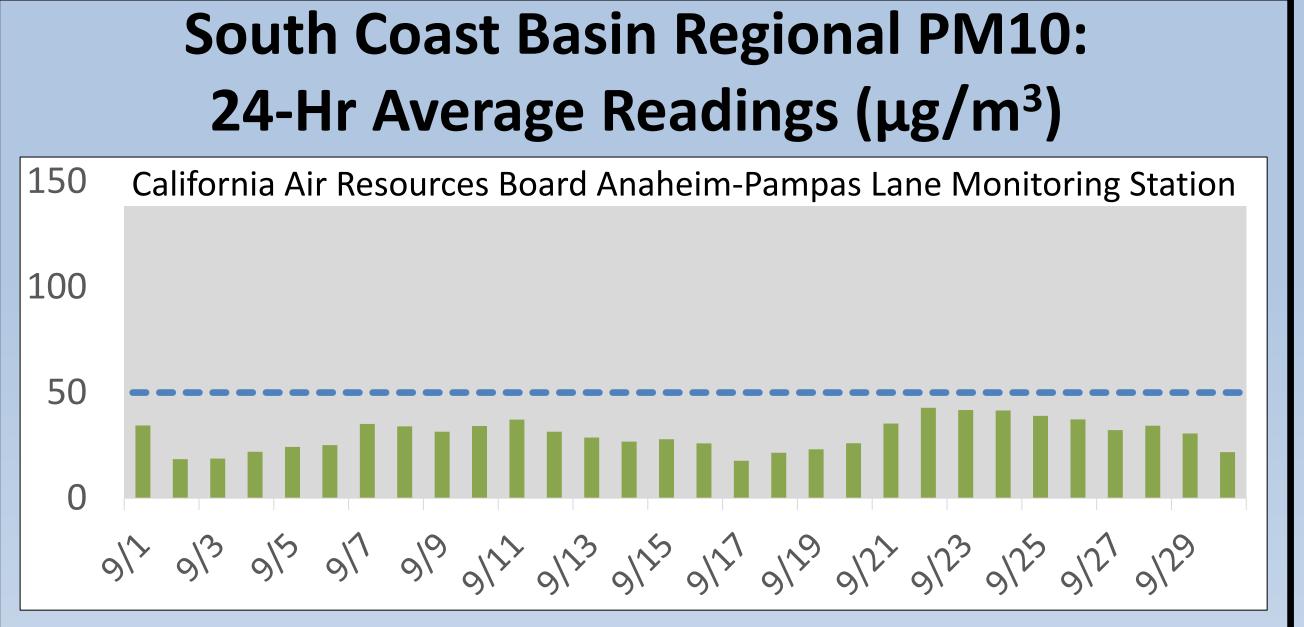

Notes: California Ambient Air Quality Standard for PM10 averaged over 24 hours is 50 μg/m³. National Ambient Air Quality Standard for PM10 averaged over 24 hours is 150 μg/m³.

Offsite Dust Monitoring

Total dust readings including upwind dust contribution

Monthly – 9/1/2023 – 9/30/2023

Closest regional station provided for comparison to regional trends.

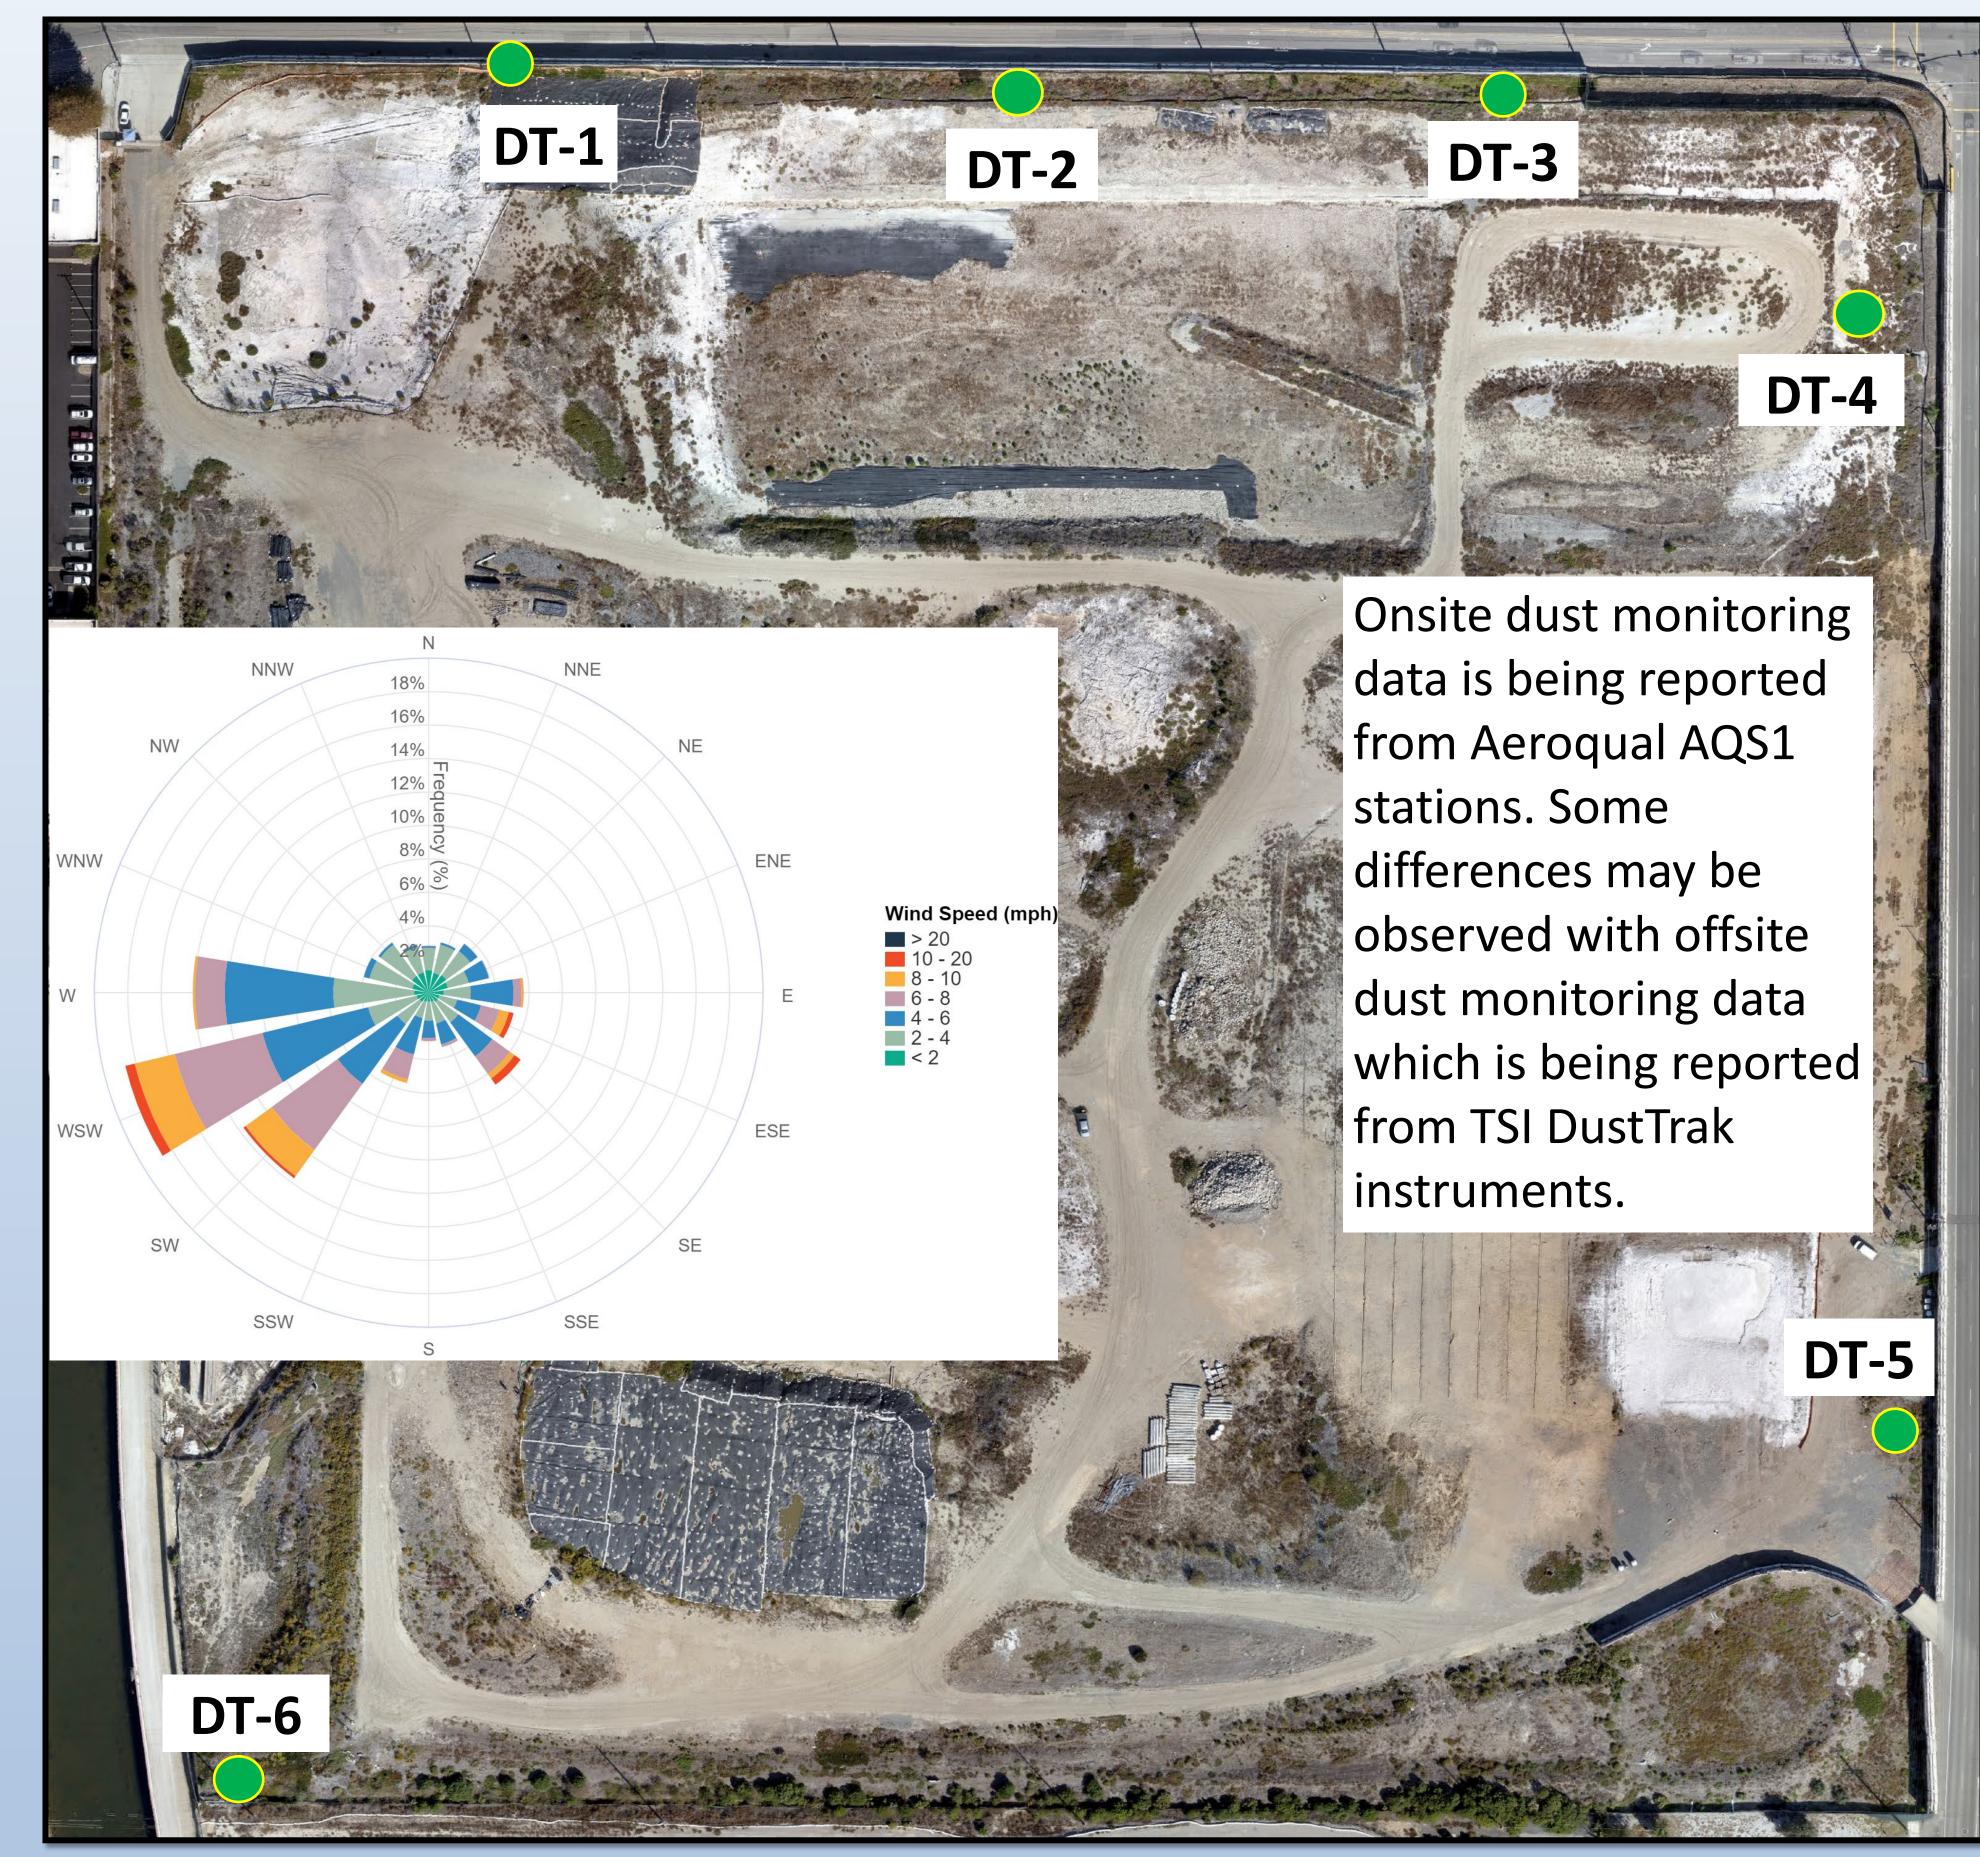

24-hour average concentrations were below air quality standards except for Sept. 21-25. Winds were blowing primarily from the west/southwest, with stronger winds in the 10-20 mph range. Marine layers and/or wet air likely contributed to higher readings on Sept. 21 and 22, whereas high regional pollution levels likely contributed to higher readings on Sept. 23-25. SCAQMD issued a smoke advisory on Sept. 23 and 24 due to wildfires in northern California. Dust monitoring at CS-DT-5 paused starting Aug. 18 due to improvement work along Banning Ave.
