## Onsite Dust Monitoring

11/1/2023 - 11/30/2023

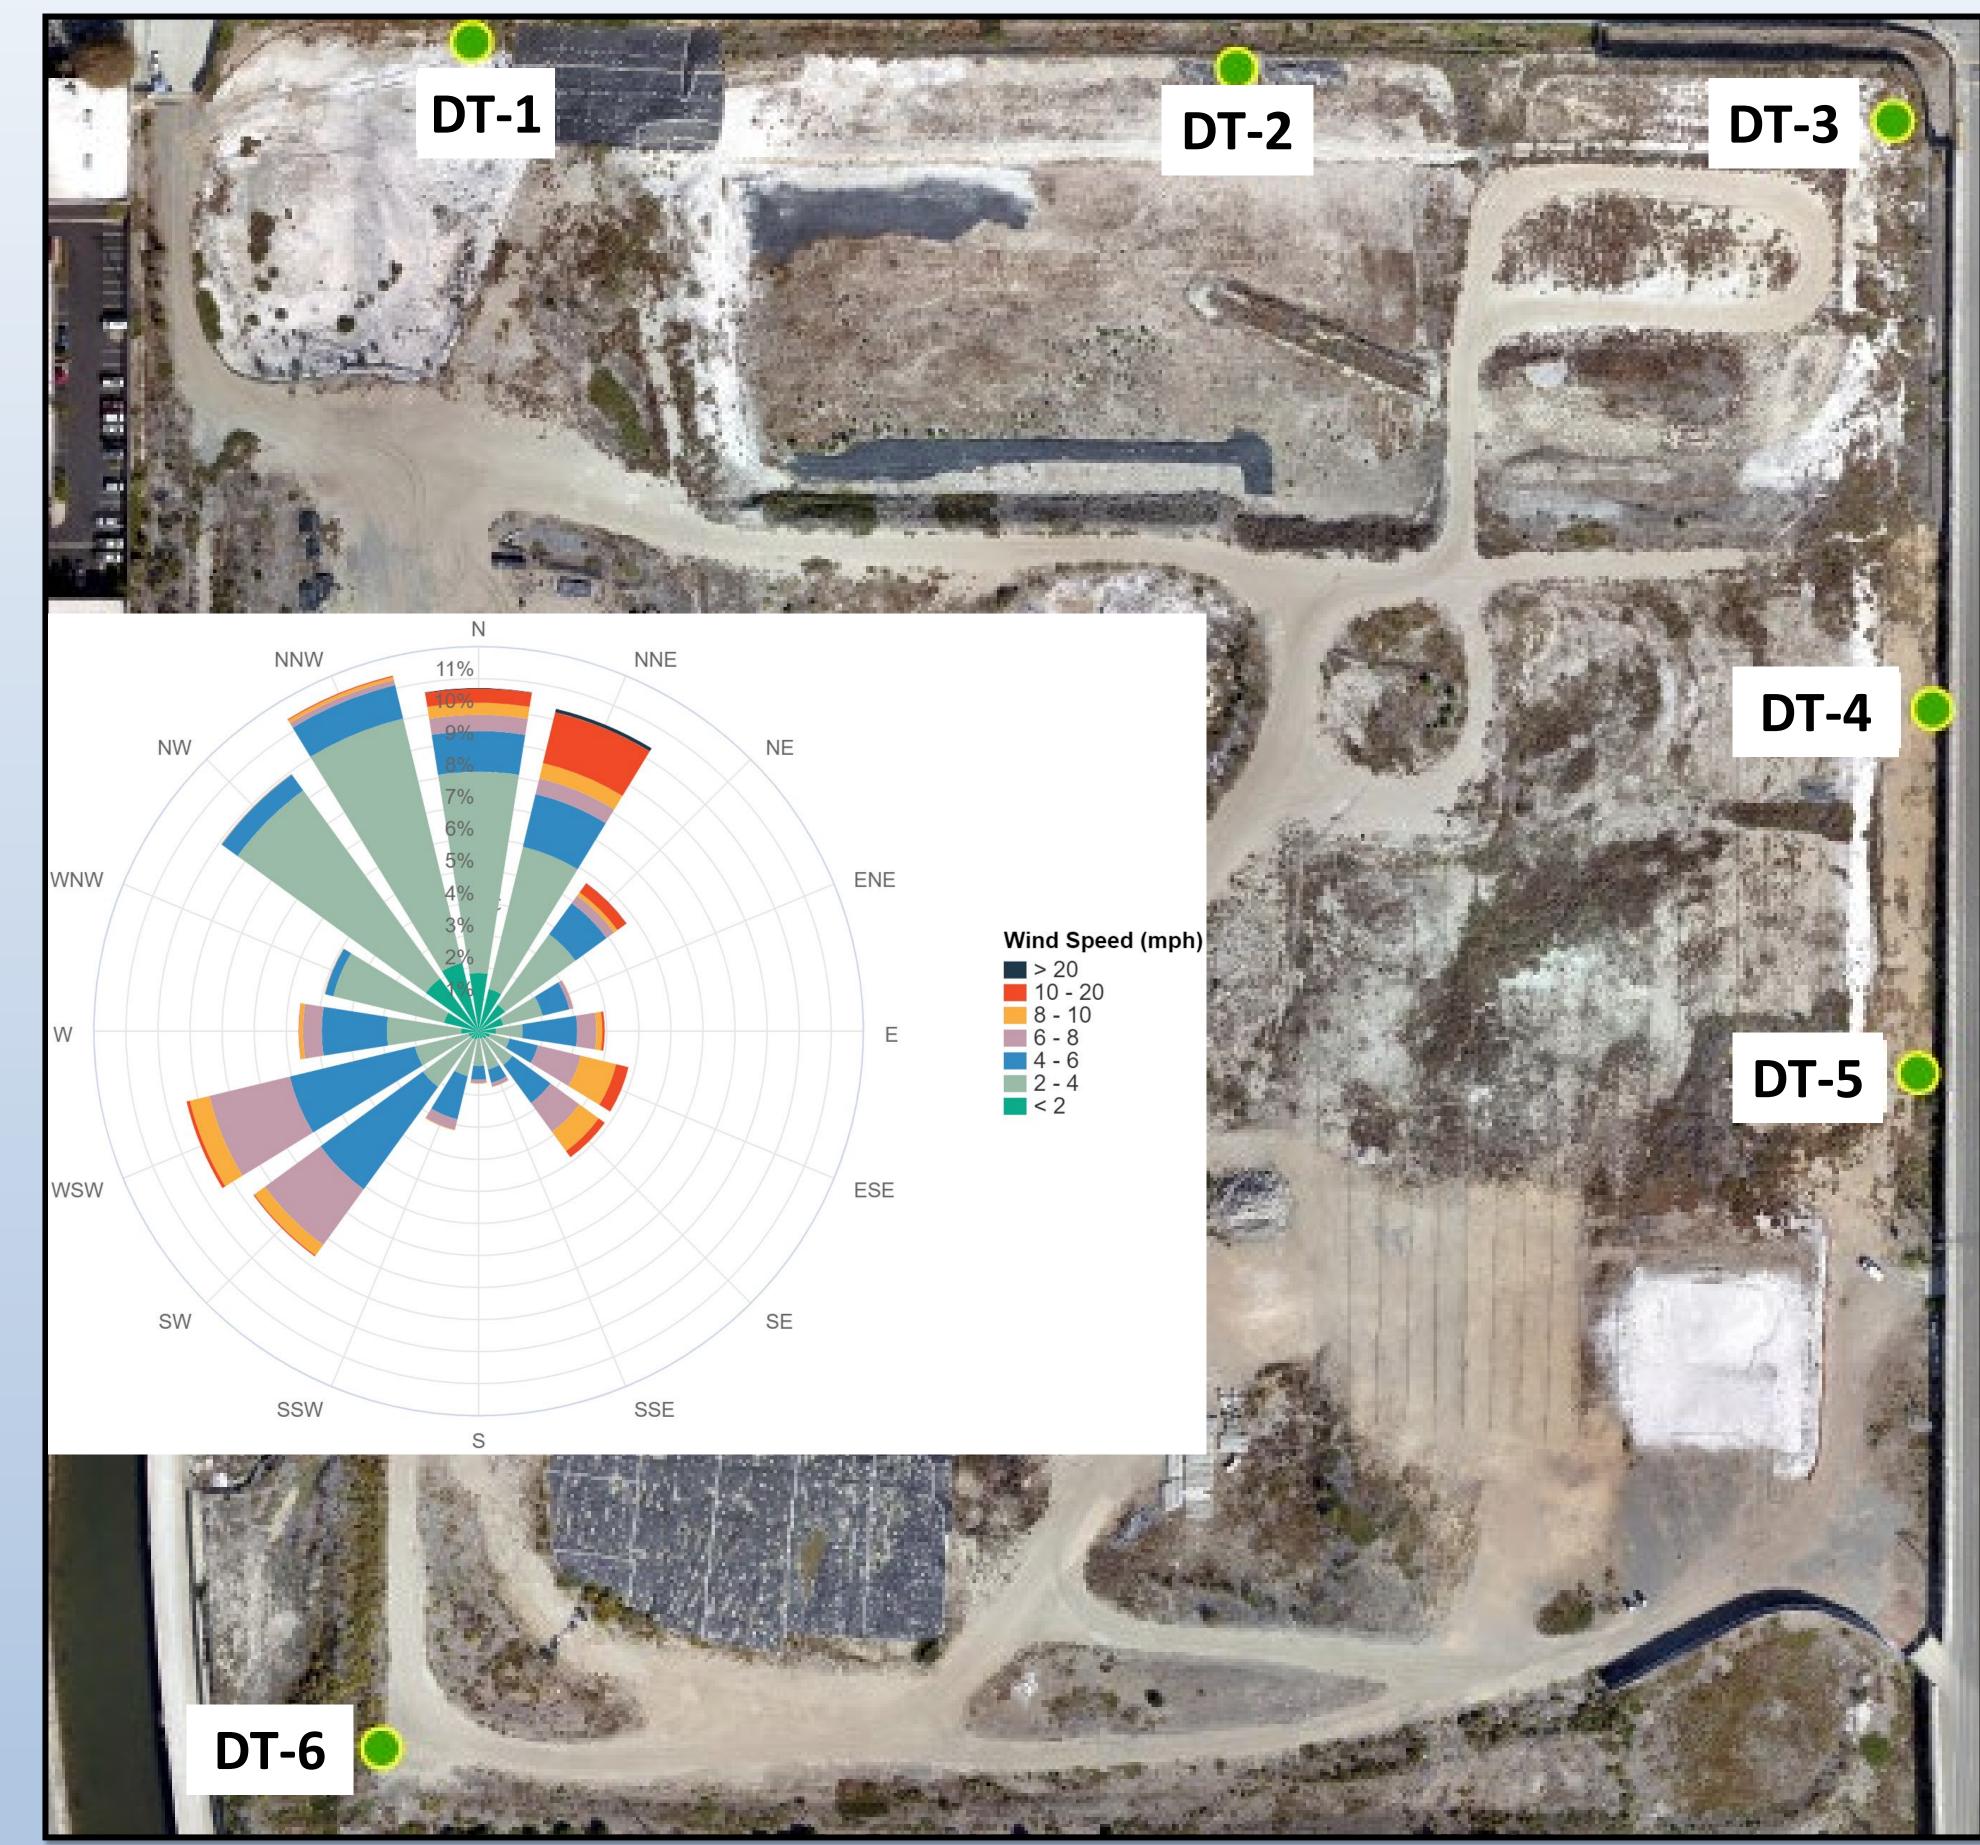

Net dust represents the dust that may be leaving the Site. This is determined by subtracting upwind data (dust blowing onto the Site from other sources) from downwind data. This helps us monitor that dust control actions are effective.

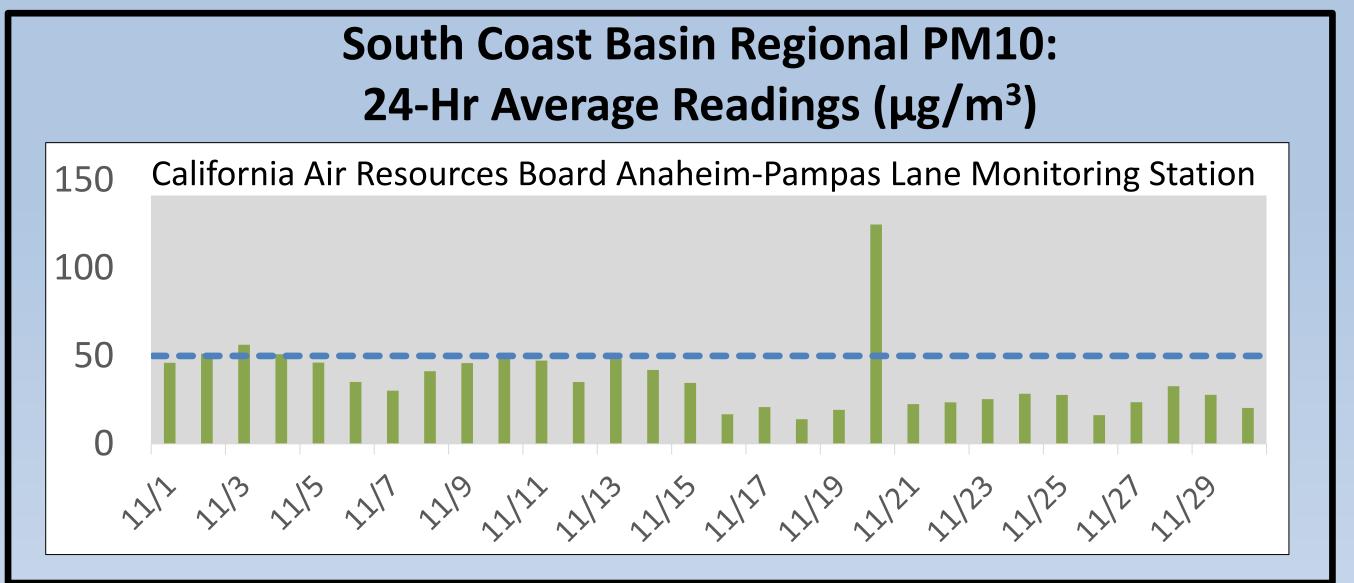

## **Individual Onsite Stations:** 24-Hr Average Dust Readings (μg/m³) DT-1 DT-2 DT-3 DT-4 DT-5 DT-6 Notes: California Ambient Air Quality Standard for PM10 averaged over 24 hours

Notes: California Ambient Air Quality Standard for PM10 averaged over 24 hours is 50  $\mu$ g/m³. National Ambient Air Quality Standard for PM10 averaged over 24 hours is 150  $\mu$ g/m³.

## Onsite Dust Monitoring

Total dust readings including upwind dust contribution Monthly – 11/1/2023 – 11/30/2023

Closest regional station provided for comparison to regional trends

24-hour average concentrations were below air quality standards. Winds were variable this month, blowing primarily from the north/northwest and stronger winds >20 mph. No data was recorded over the Thanksgiving Holiday (November 17-26).
