

# Onsite Dust Monitoring

12/1/2023 – 12/31/2023

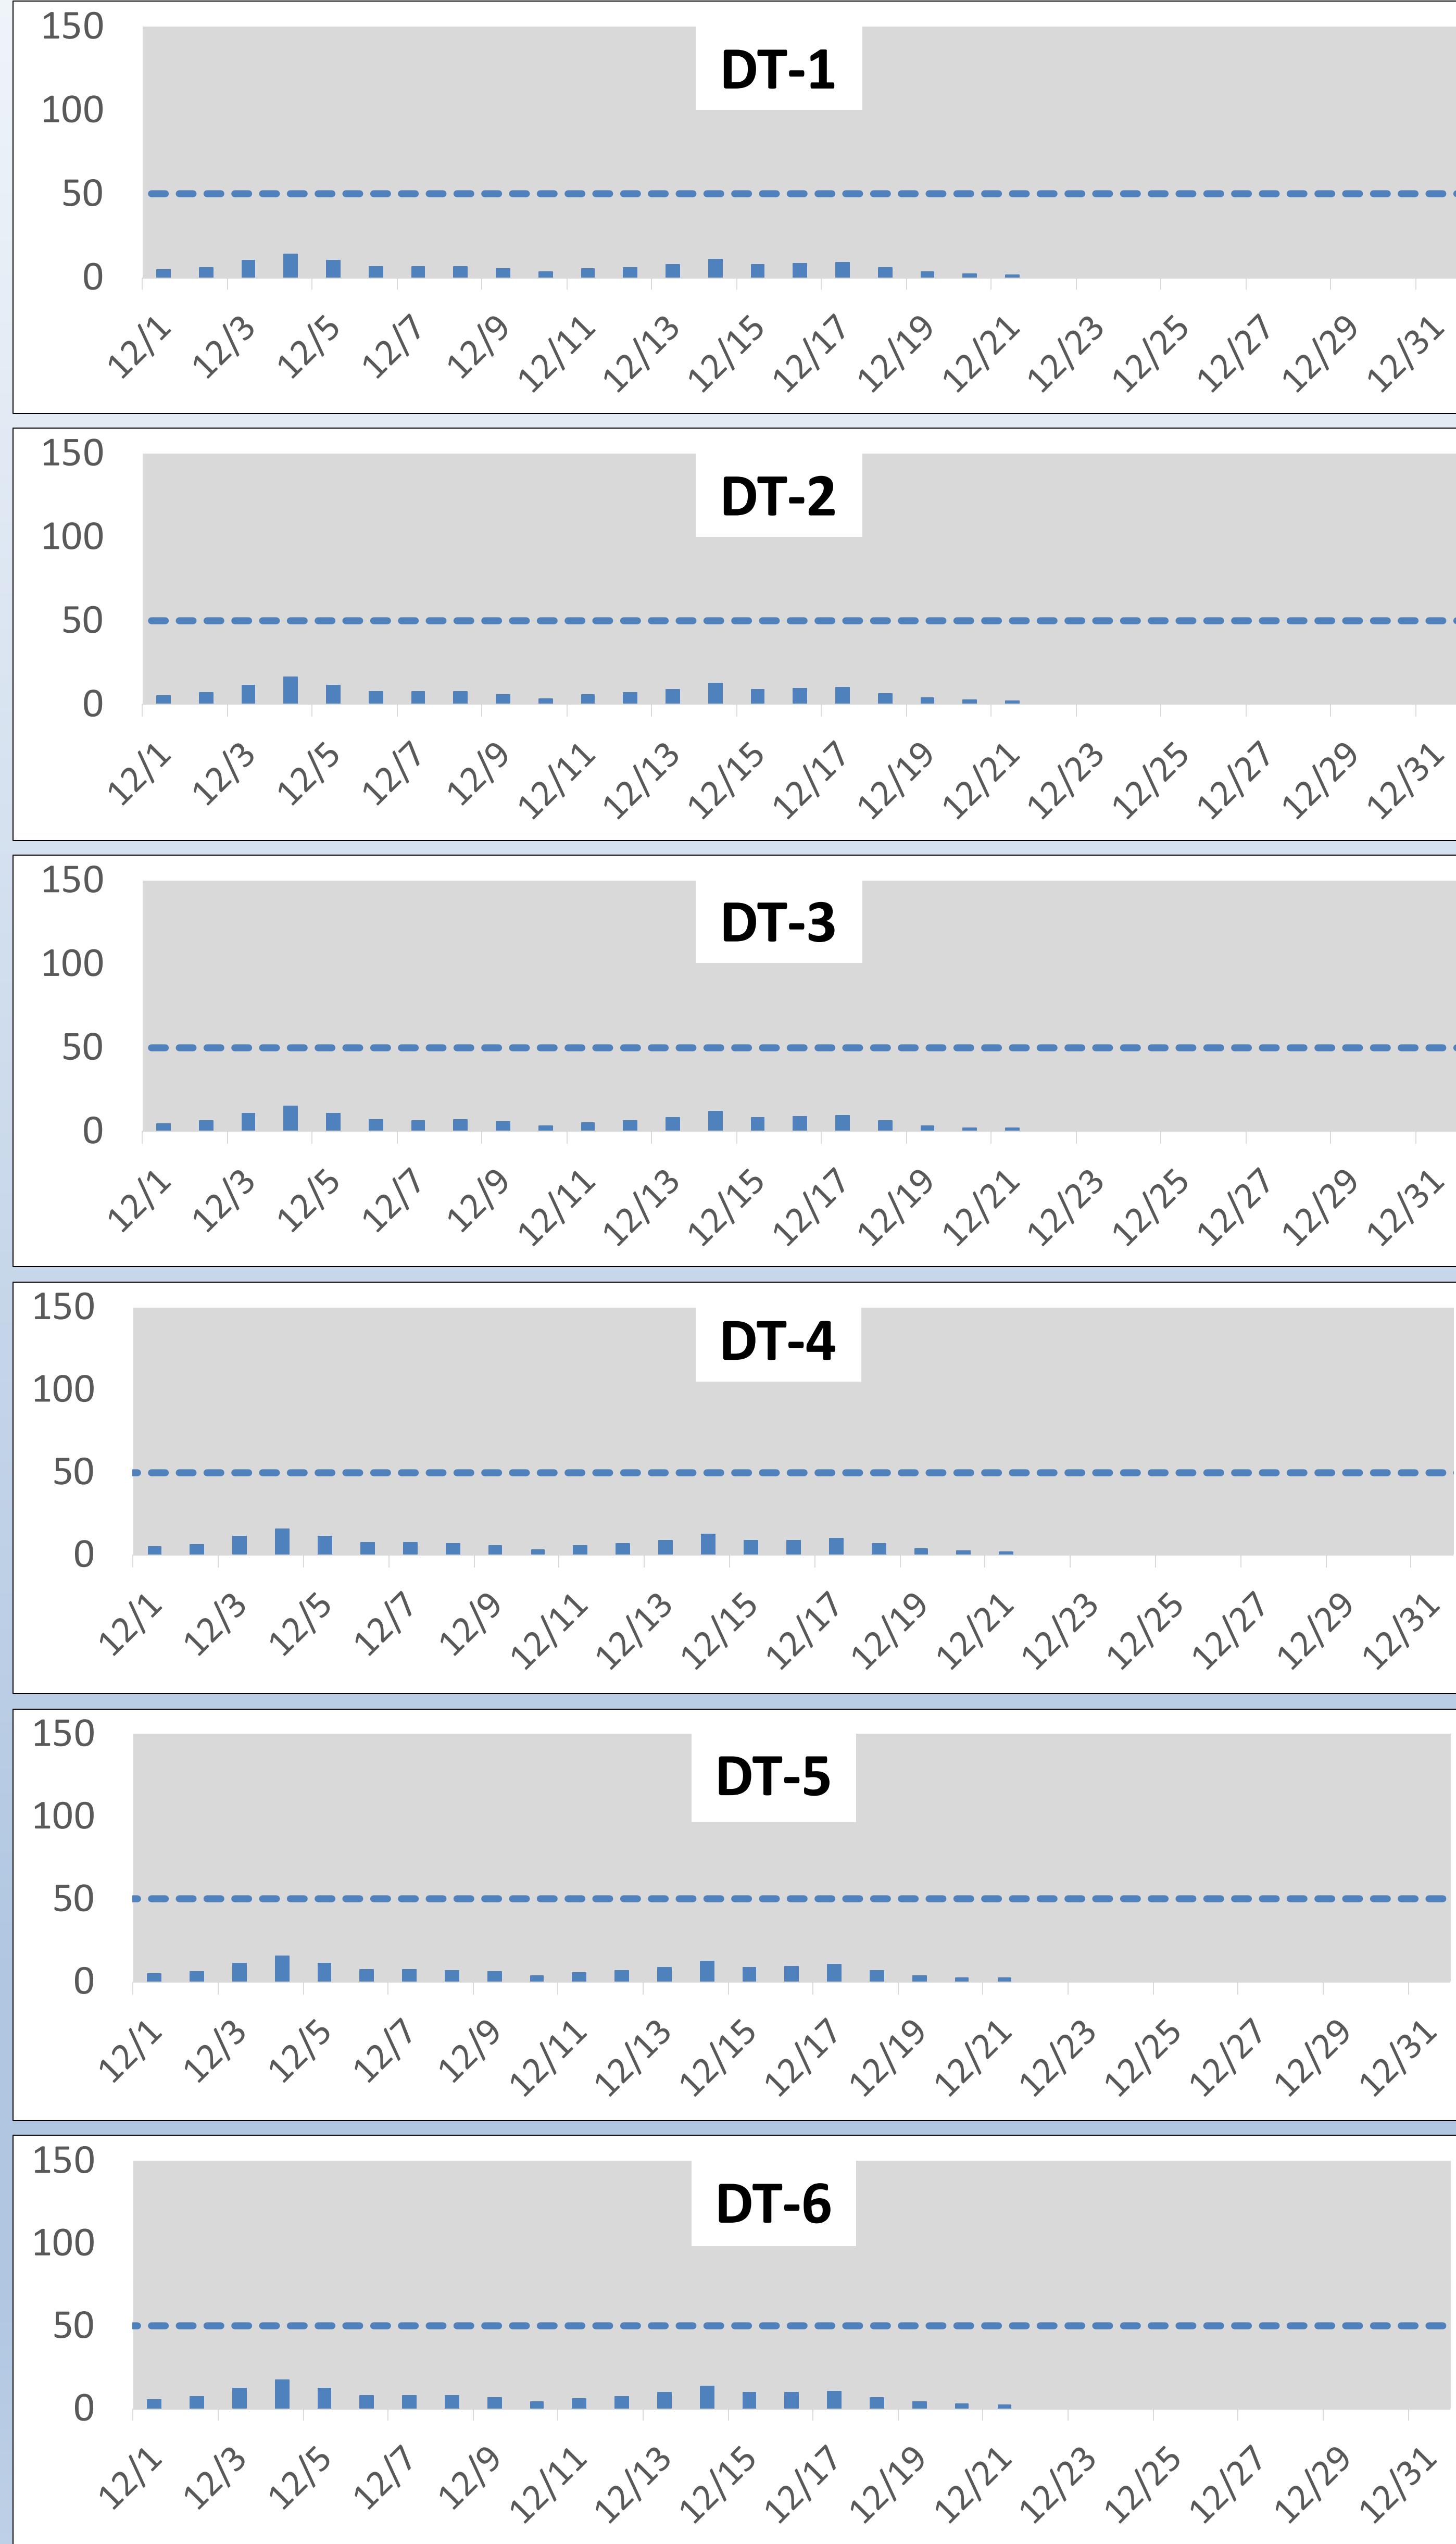

## Net Dust (All Downwind Stations)

Net dust represents the dust that may be leaving the Site. This is determined by subtracting upwind data (dust blowing onto the Site from other sources) from downwind data. This helps us monitor that dust control actions are effective. No data was recorded over the winter holidays (December 22 to January 1).

## Individual Onsite Stations:

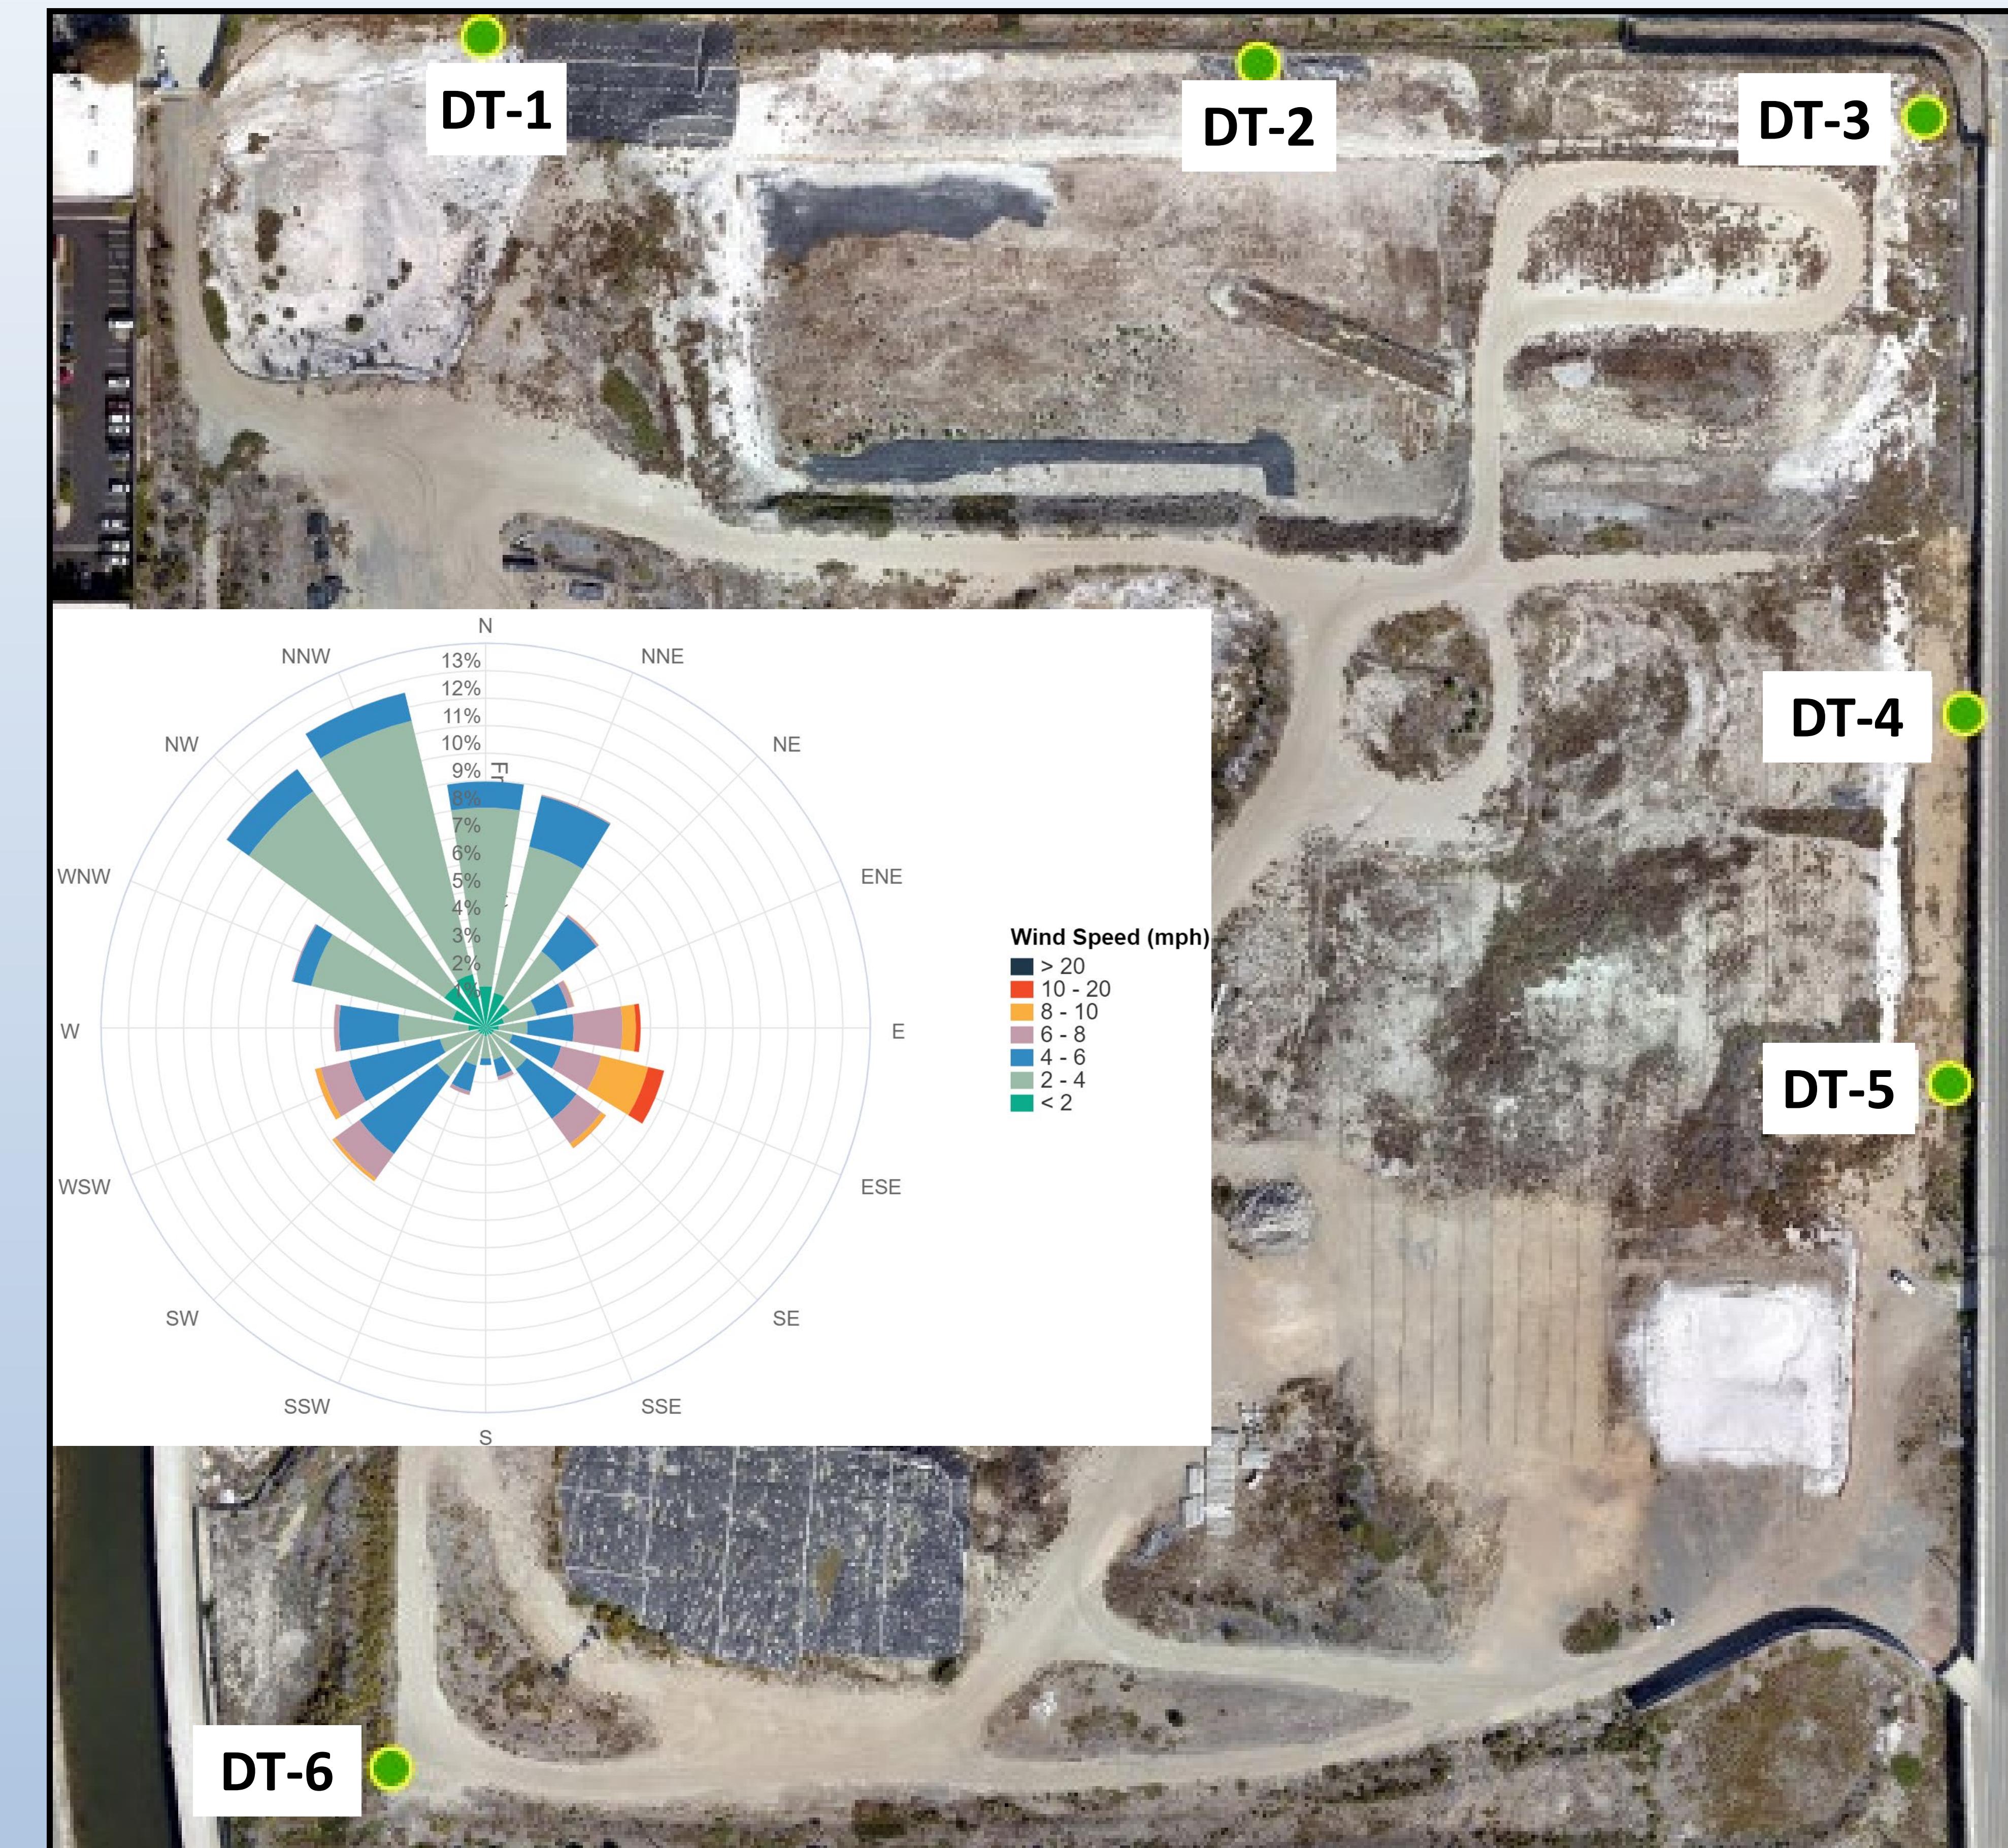

### 24-Hr Average Dust Readings ( $\mu\text{g}/\text{m}^3$ )

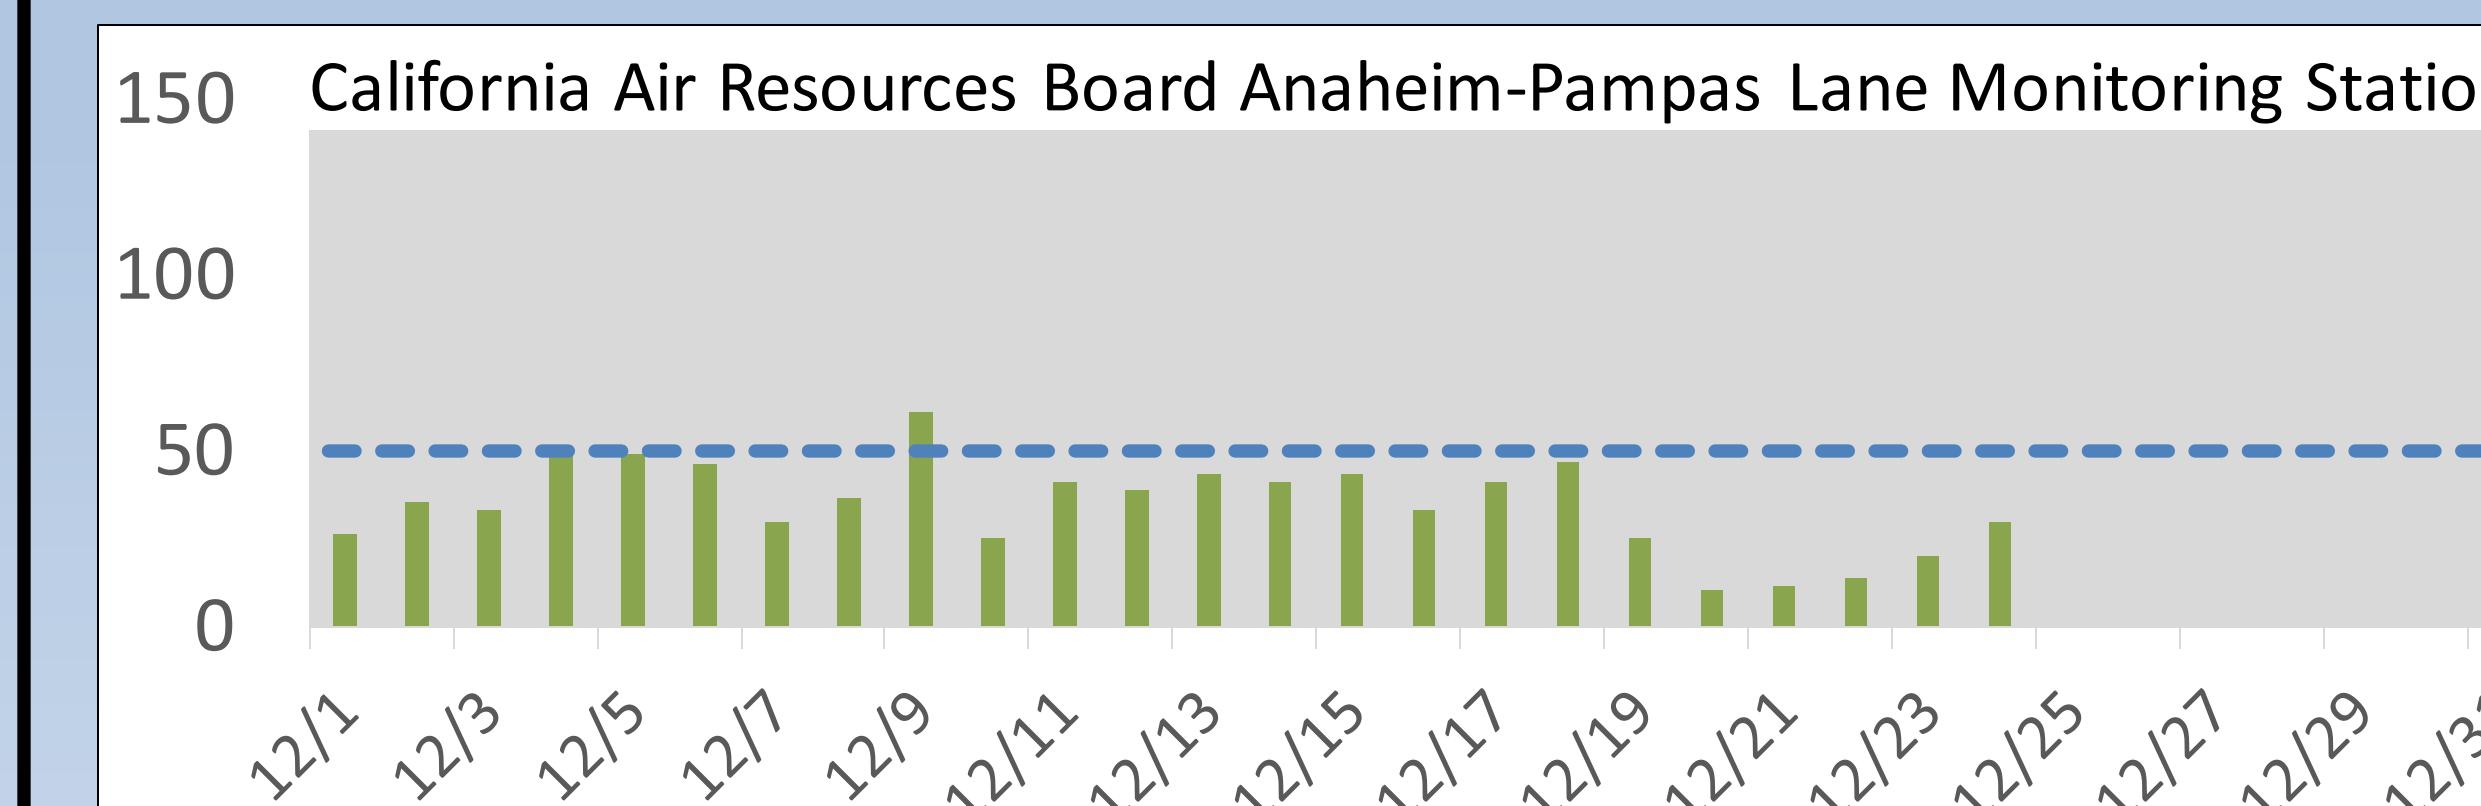

Notes: California Ambient Air Quality Standard for PM10 averaged over 24 hours is  $50 \mu\text{g}/\text{m}^3$ . National Ambient Air Quality Standard for PM10 averaged over 24 hours is  $150 \mu\text{g}/\text{m}^3$ .

# Onsite Dust Monitoring

Total dust readings including upwind dust contribution  
Monthly – 12/1/2023 – 12/31/2023

### South Coast Basin Regional PM10: 24-Hr Average Readings ( $\mu\text{g}/\text{m}^3$ )

Closest regional station provided for comparison to regional trends

24-hour average concentrations were below air quality standards. Winds were variable this month, blowing primarily from the north/northwest and stronger winds in the 10-20 mph range. No data was recorded over the winter holidays (December 22 to January 1).
