

# Onsite Dust Monitoring

7/24/2023 – 7/30/2023

## Net Dust (All Downwind Stations)

**Net dust readings are not above the SCAQMD Dust Limit of  $25 \mu\text{g}/\text{m}^3$  indicating that the Site is not contributing to elevated dust readings offsite.**

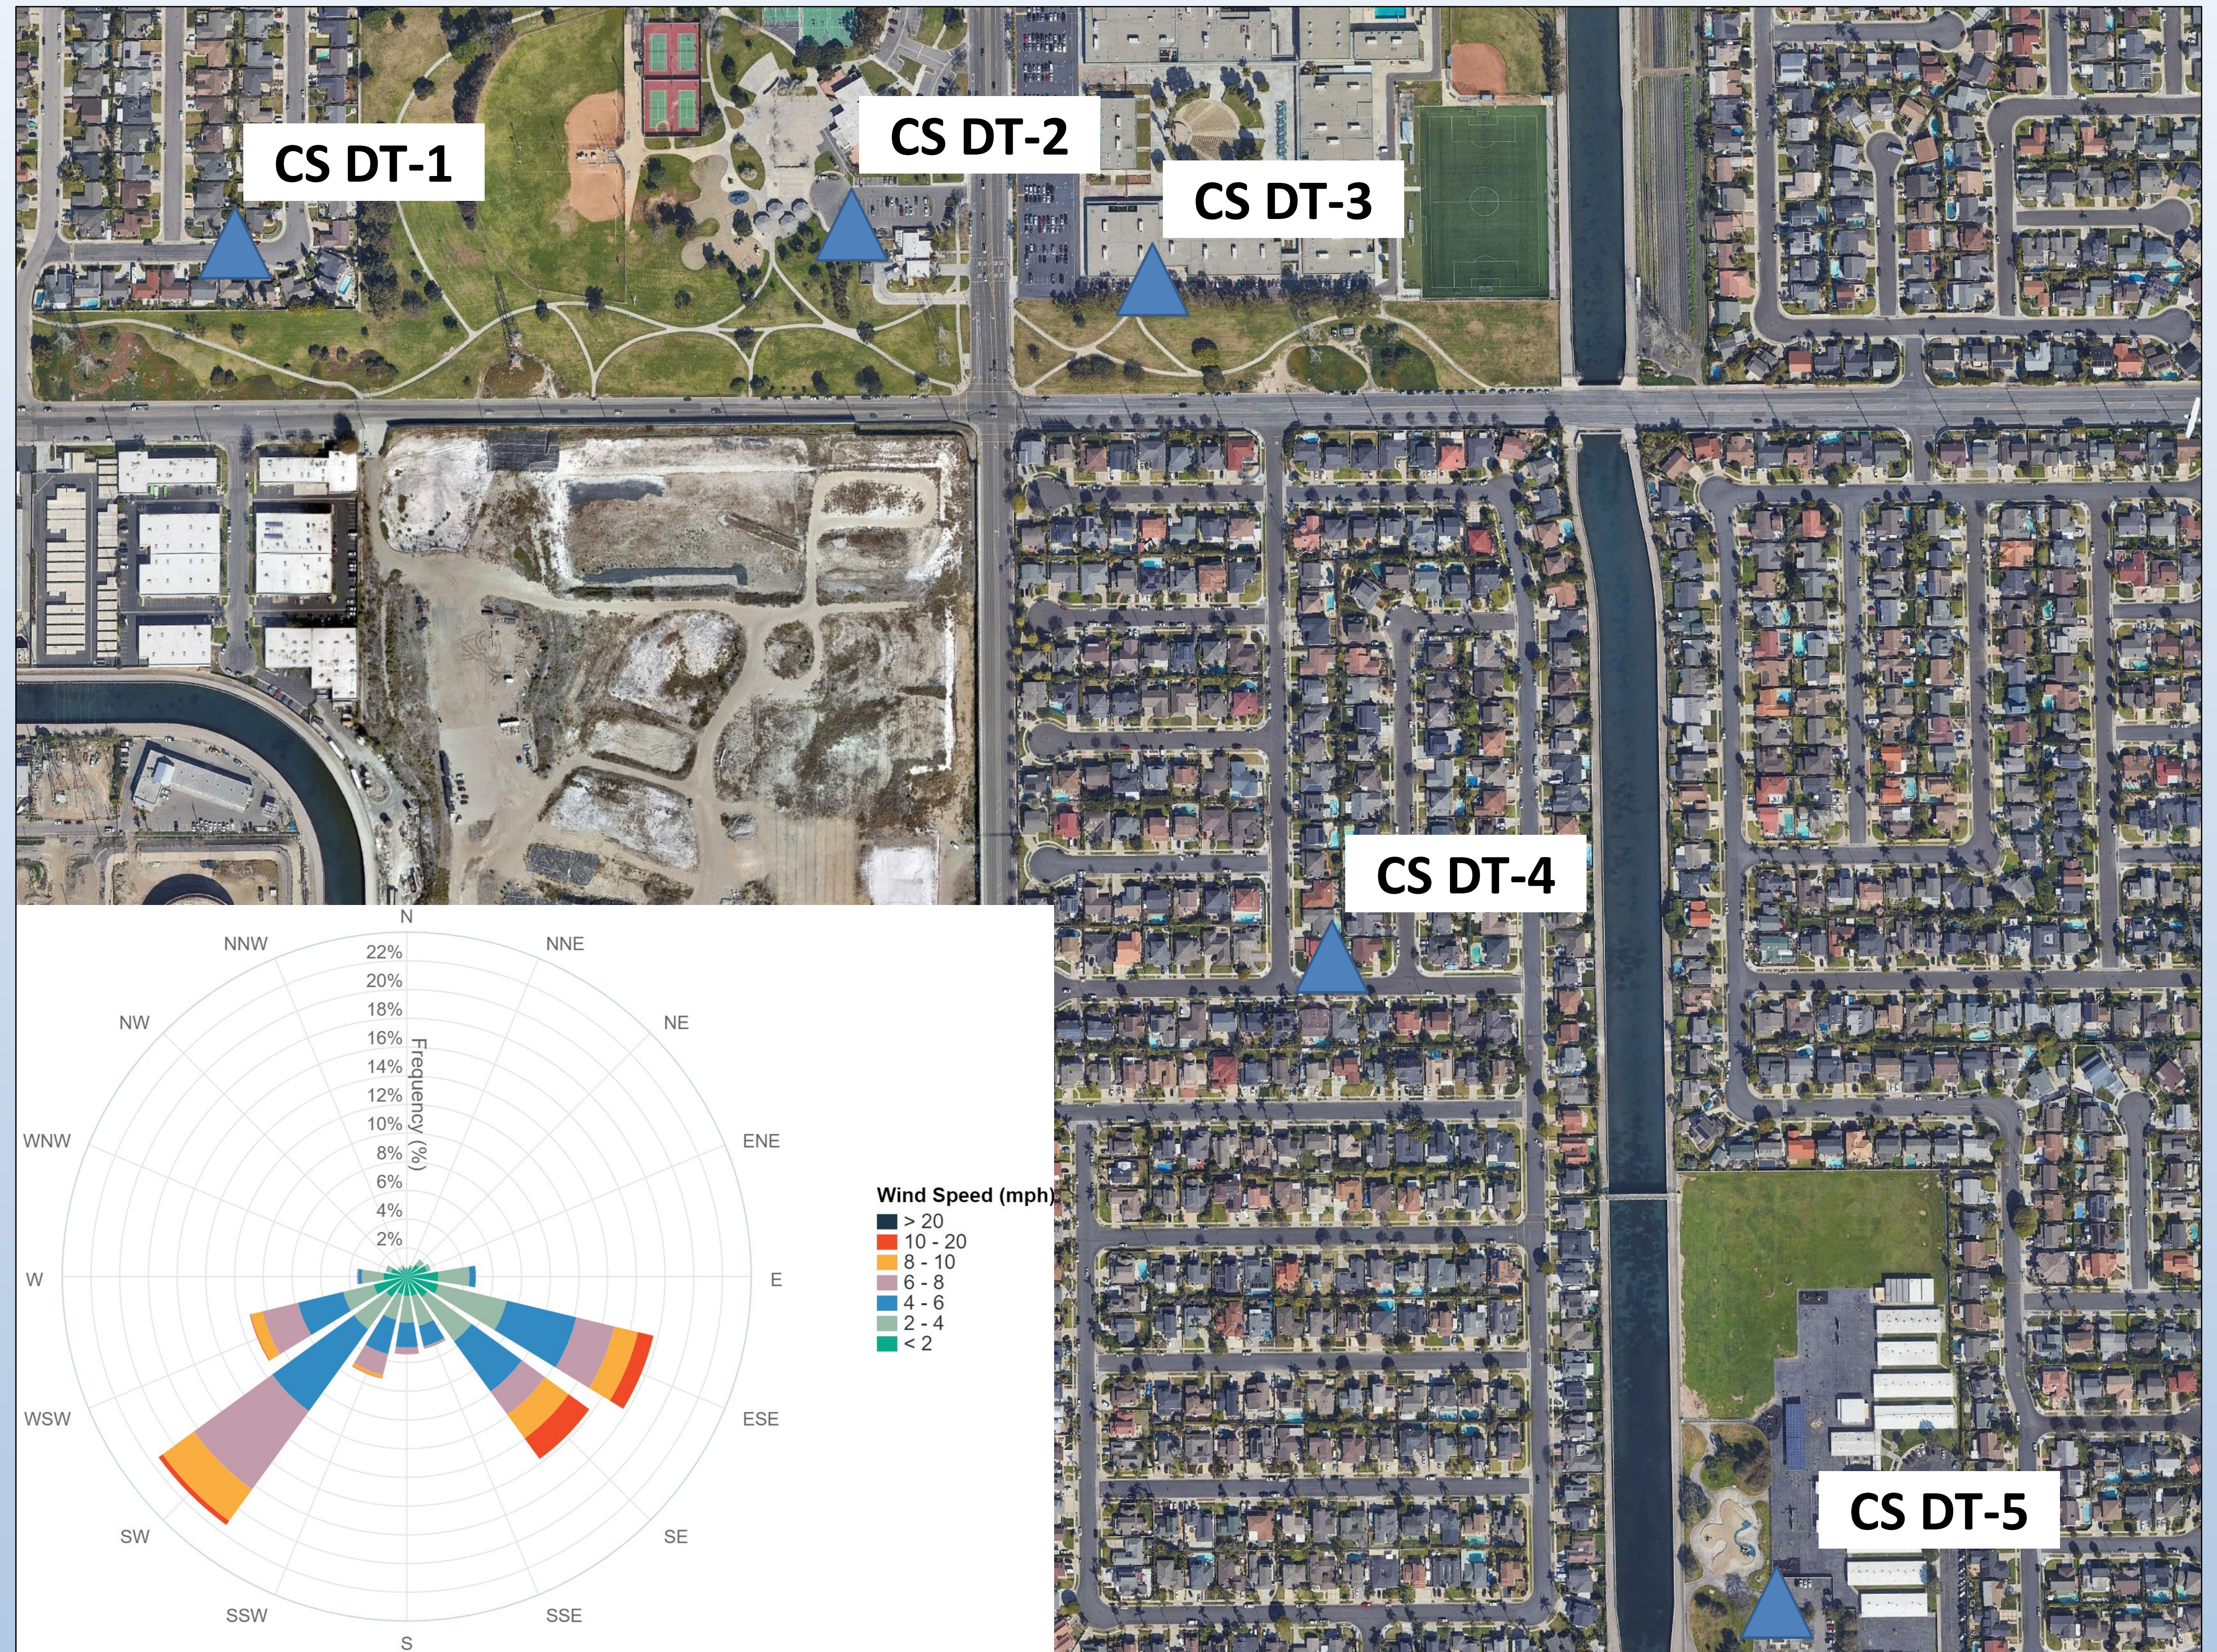

Net dust represents the dust that may be leaving the Site. This is determined by subtracting upwind data (dust blowing onto the Site from other sources) from downwind data. This helps us monitor that dust control actions are effective.

# Offsite Dust Monitoring

Total dust readings including upwind dust contribution  
Weekly – 7/24/2023 – 7/30/2023

## Individual Offsite Stations: 24-Hr Average Dust Readings ( $\mu\text{g}/\text{m}^3$ )

## South Coast Basin Regional PM10: 24-Hr Average Readings ( $\mu\text{g}/\text{m}^3$ )

Closest regional station provided for comparison to regional trends.

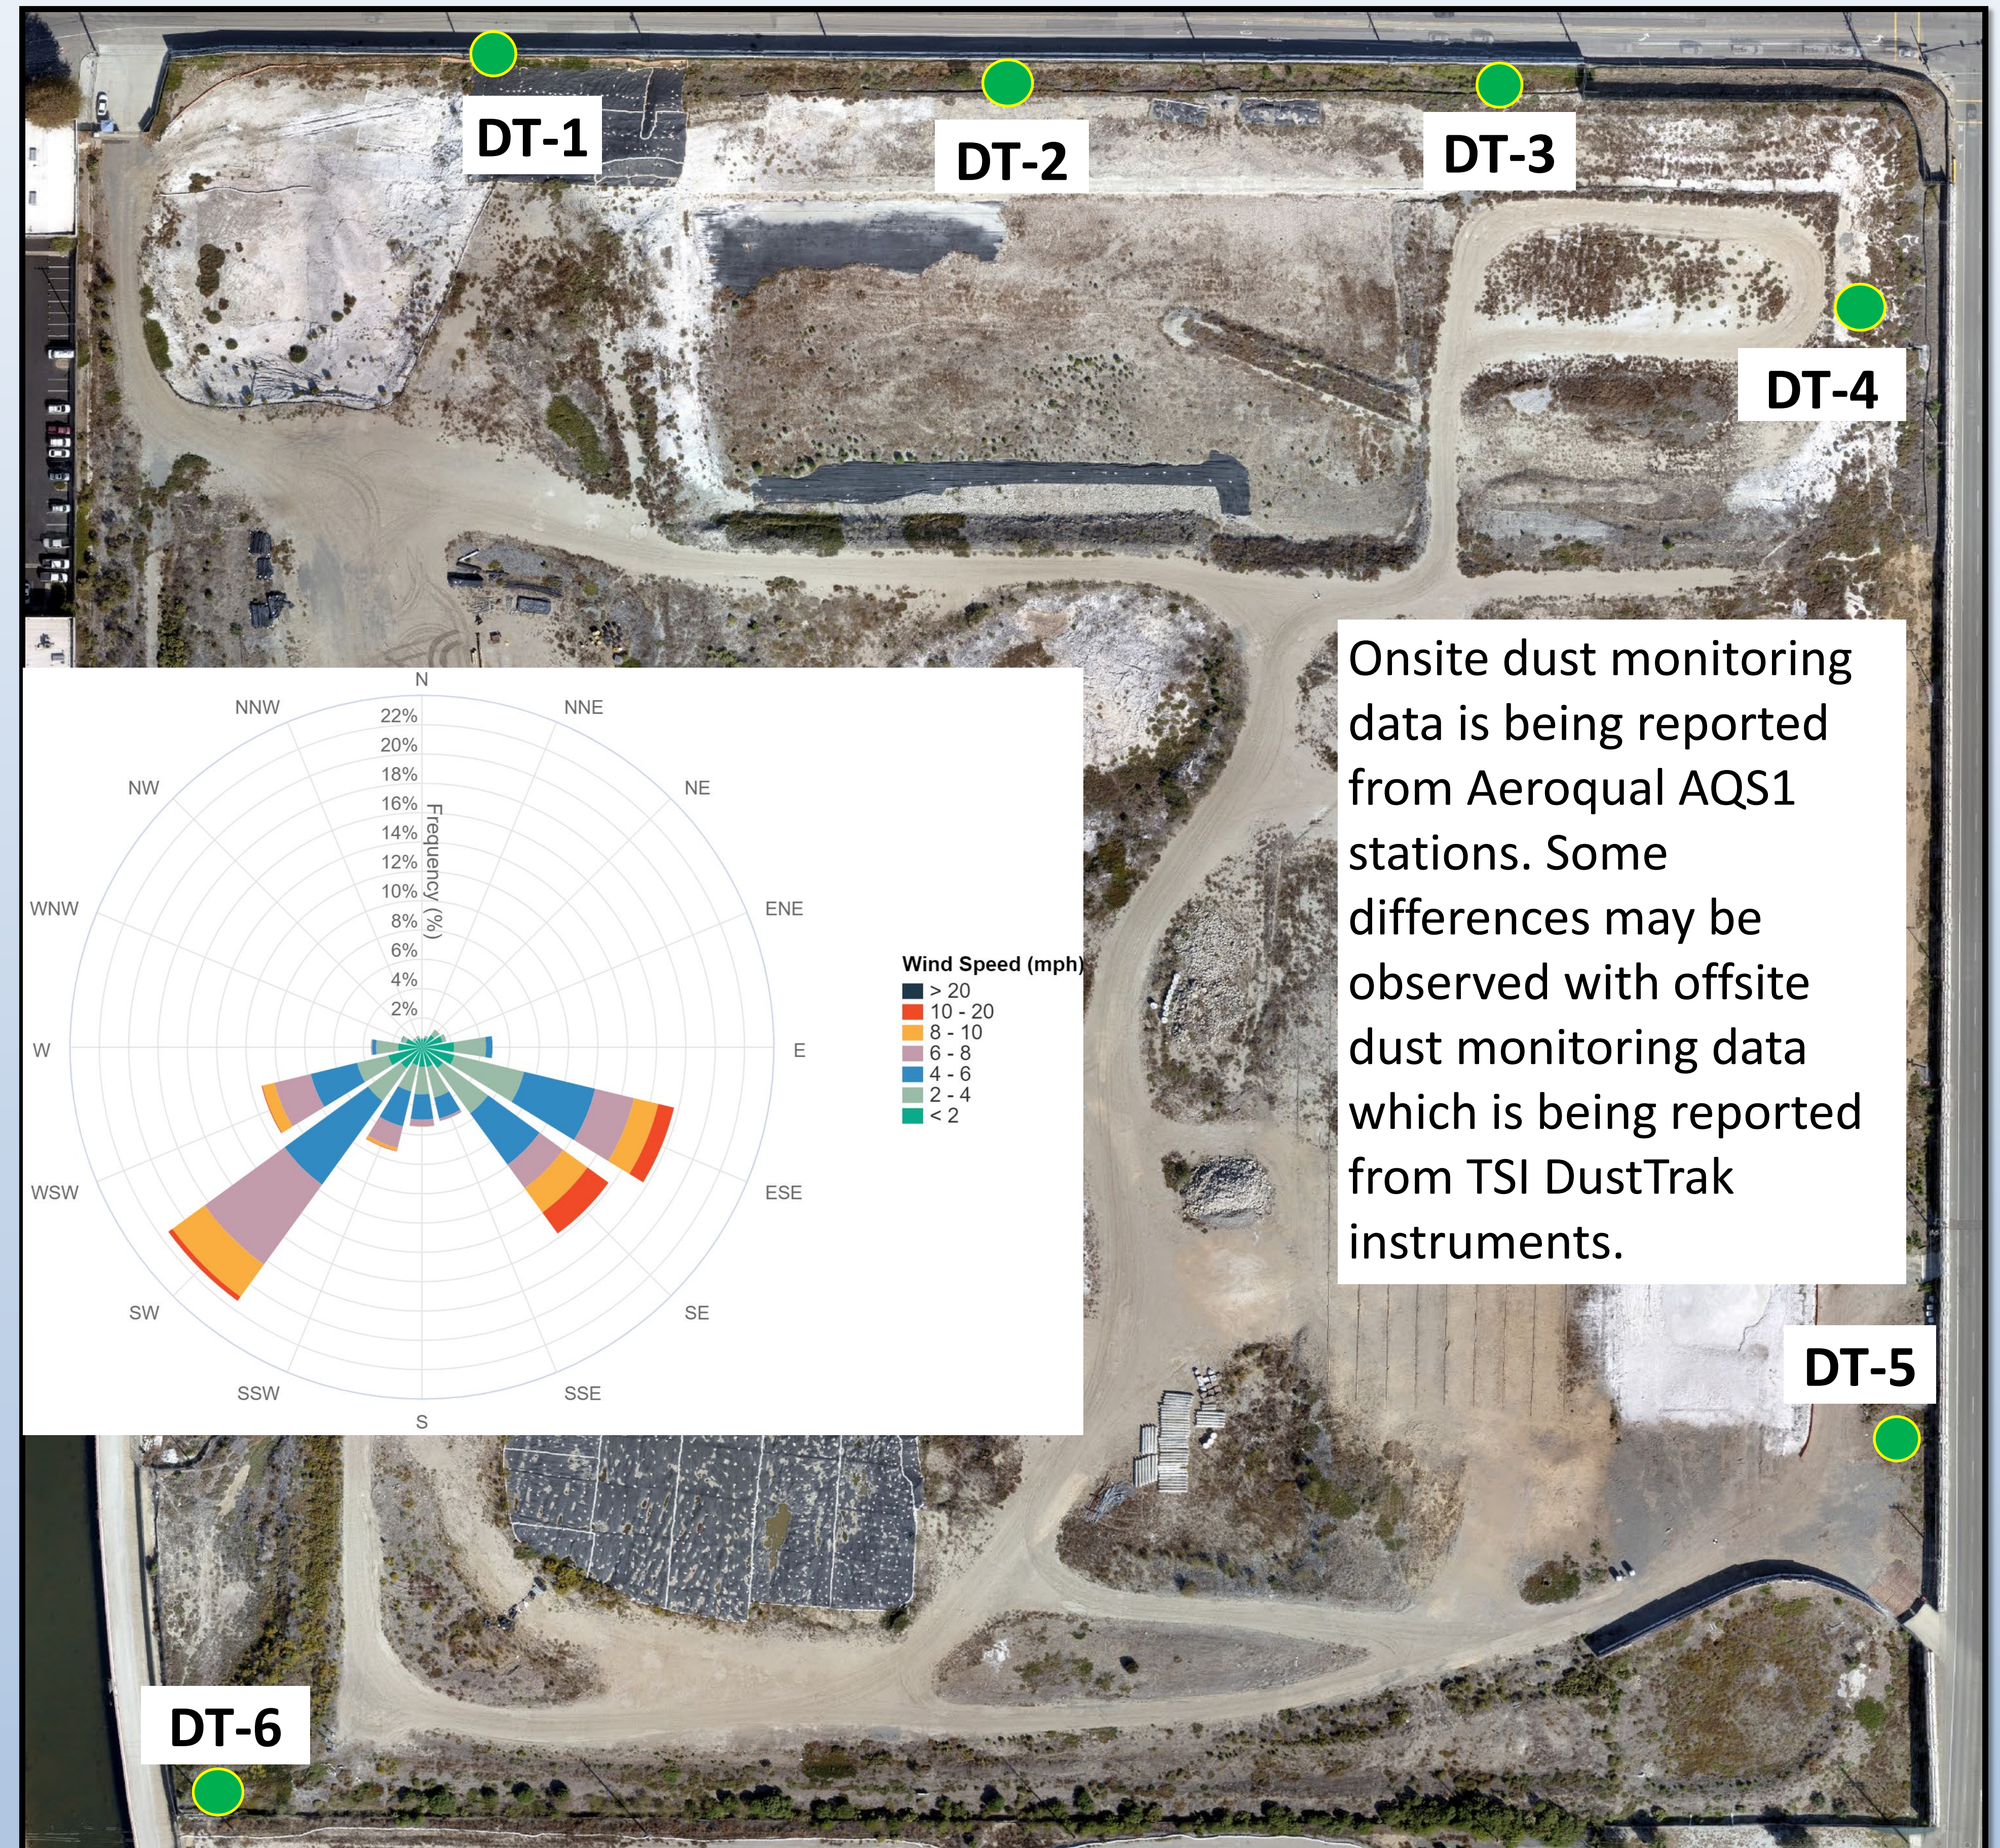

24-hour average concentrations were below air quality standards. Winds were blowing primarily from the southwest and to a lesser extent the east/southeast, with stronger winds in the 10-20 mph range.

Notes: California Ambient Air Quality Standard for PM10 averaged over 24 hours is  $50 \mu\text{g}/\text{m}^3$ . National Ambient Air Quality Standard for PM10 averaged over 24 hours is  $150 \mu\text{g}/\text{m}^3$ .
