Onsite Dust Monitoring

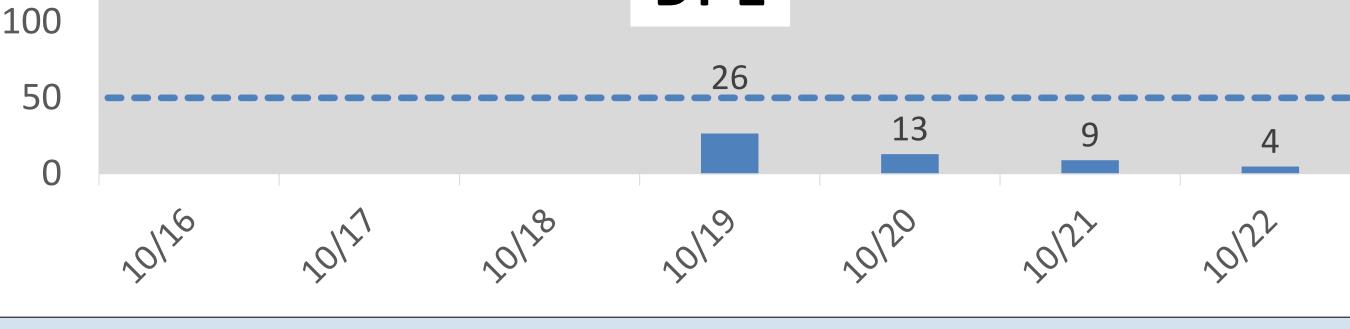

10/16/2023 - 10/22/2023

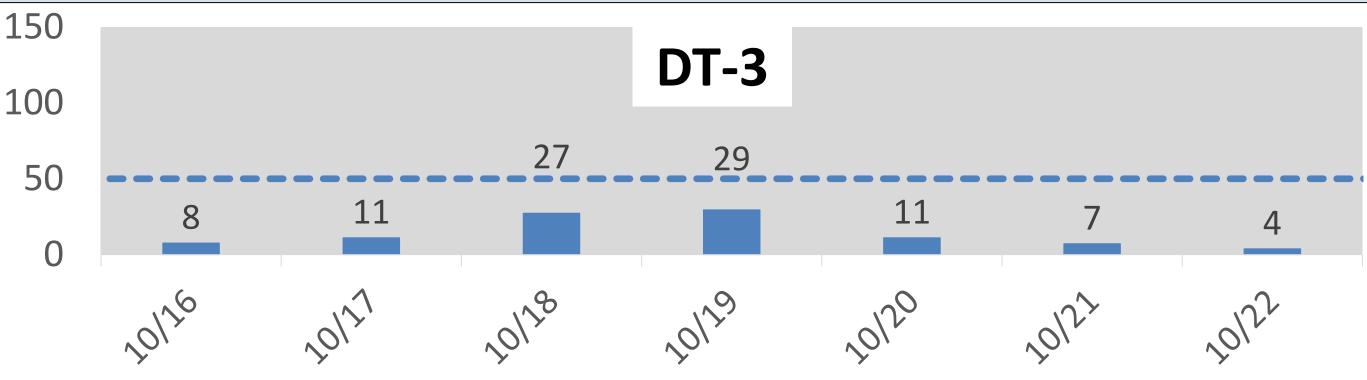

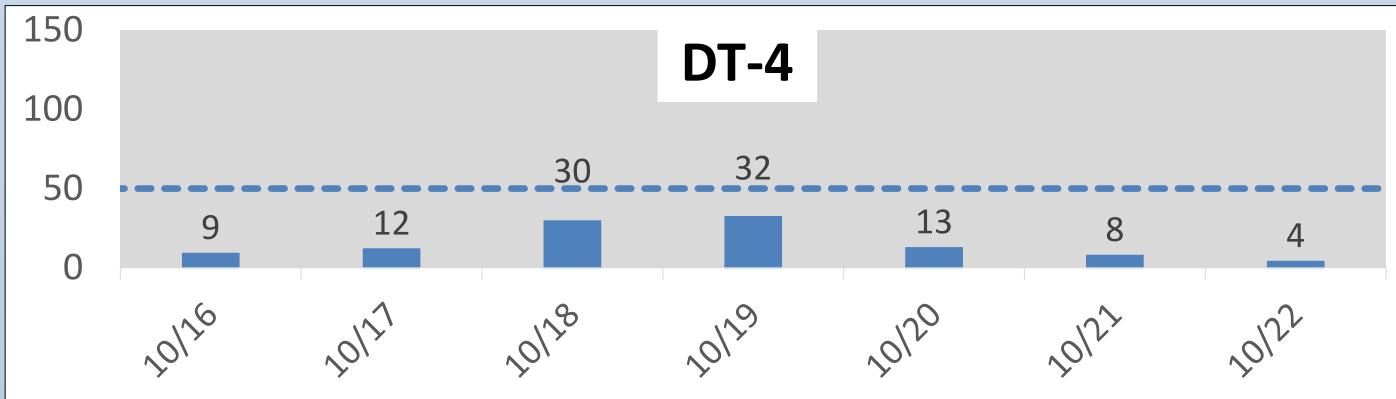

Net dust represents the dust that may be leaving the Site. This is determined by subtracting upwind data (dust blowing onto the Site from other sources) from downwind data. This helps us monitor that dust control actions are effective.

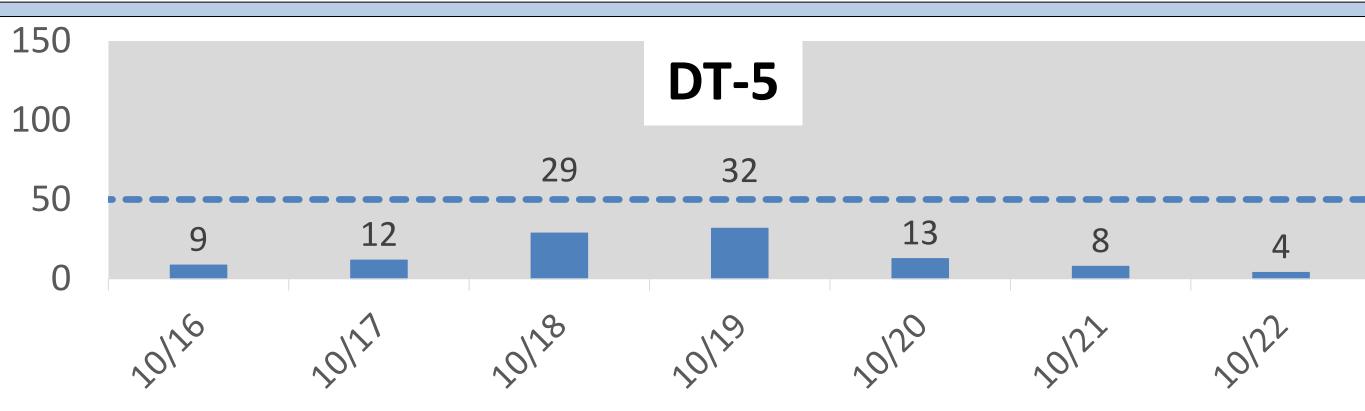

Individual Onsite Stations: 24-Hr Average Dust Readings (μg/m³) DT-1

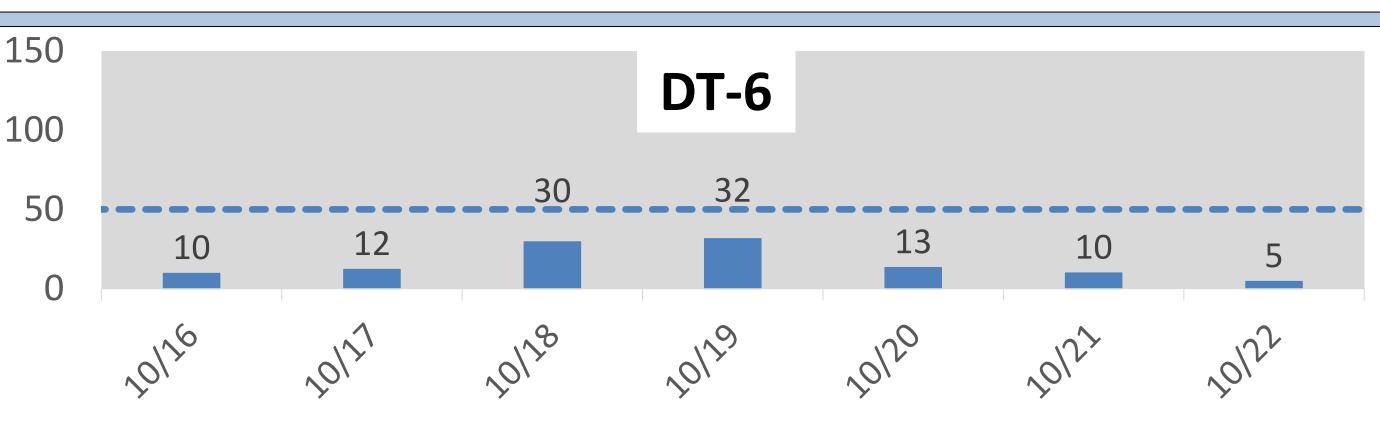

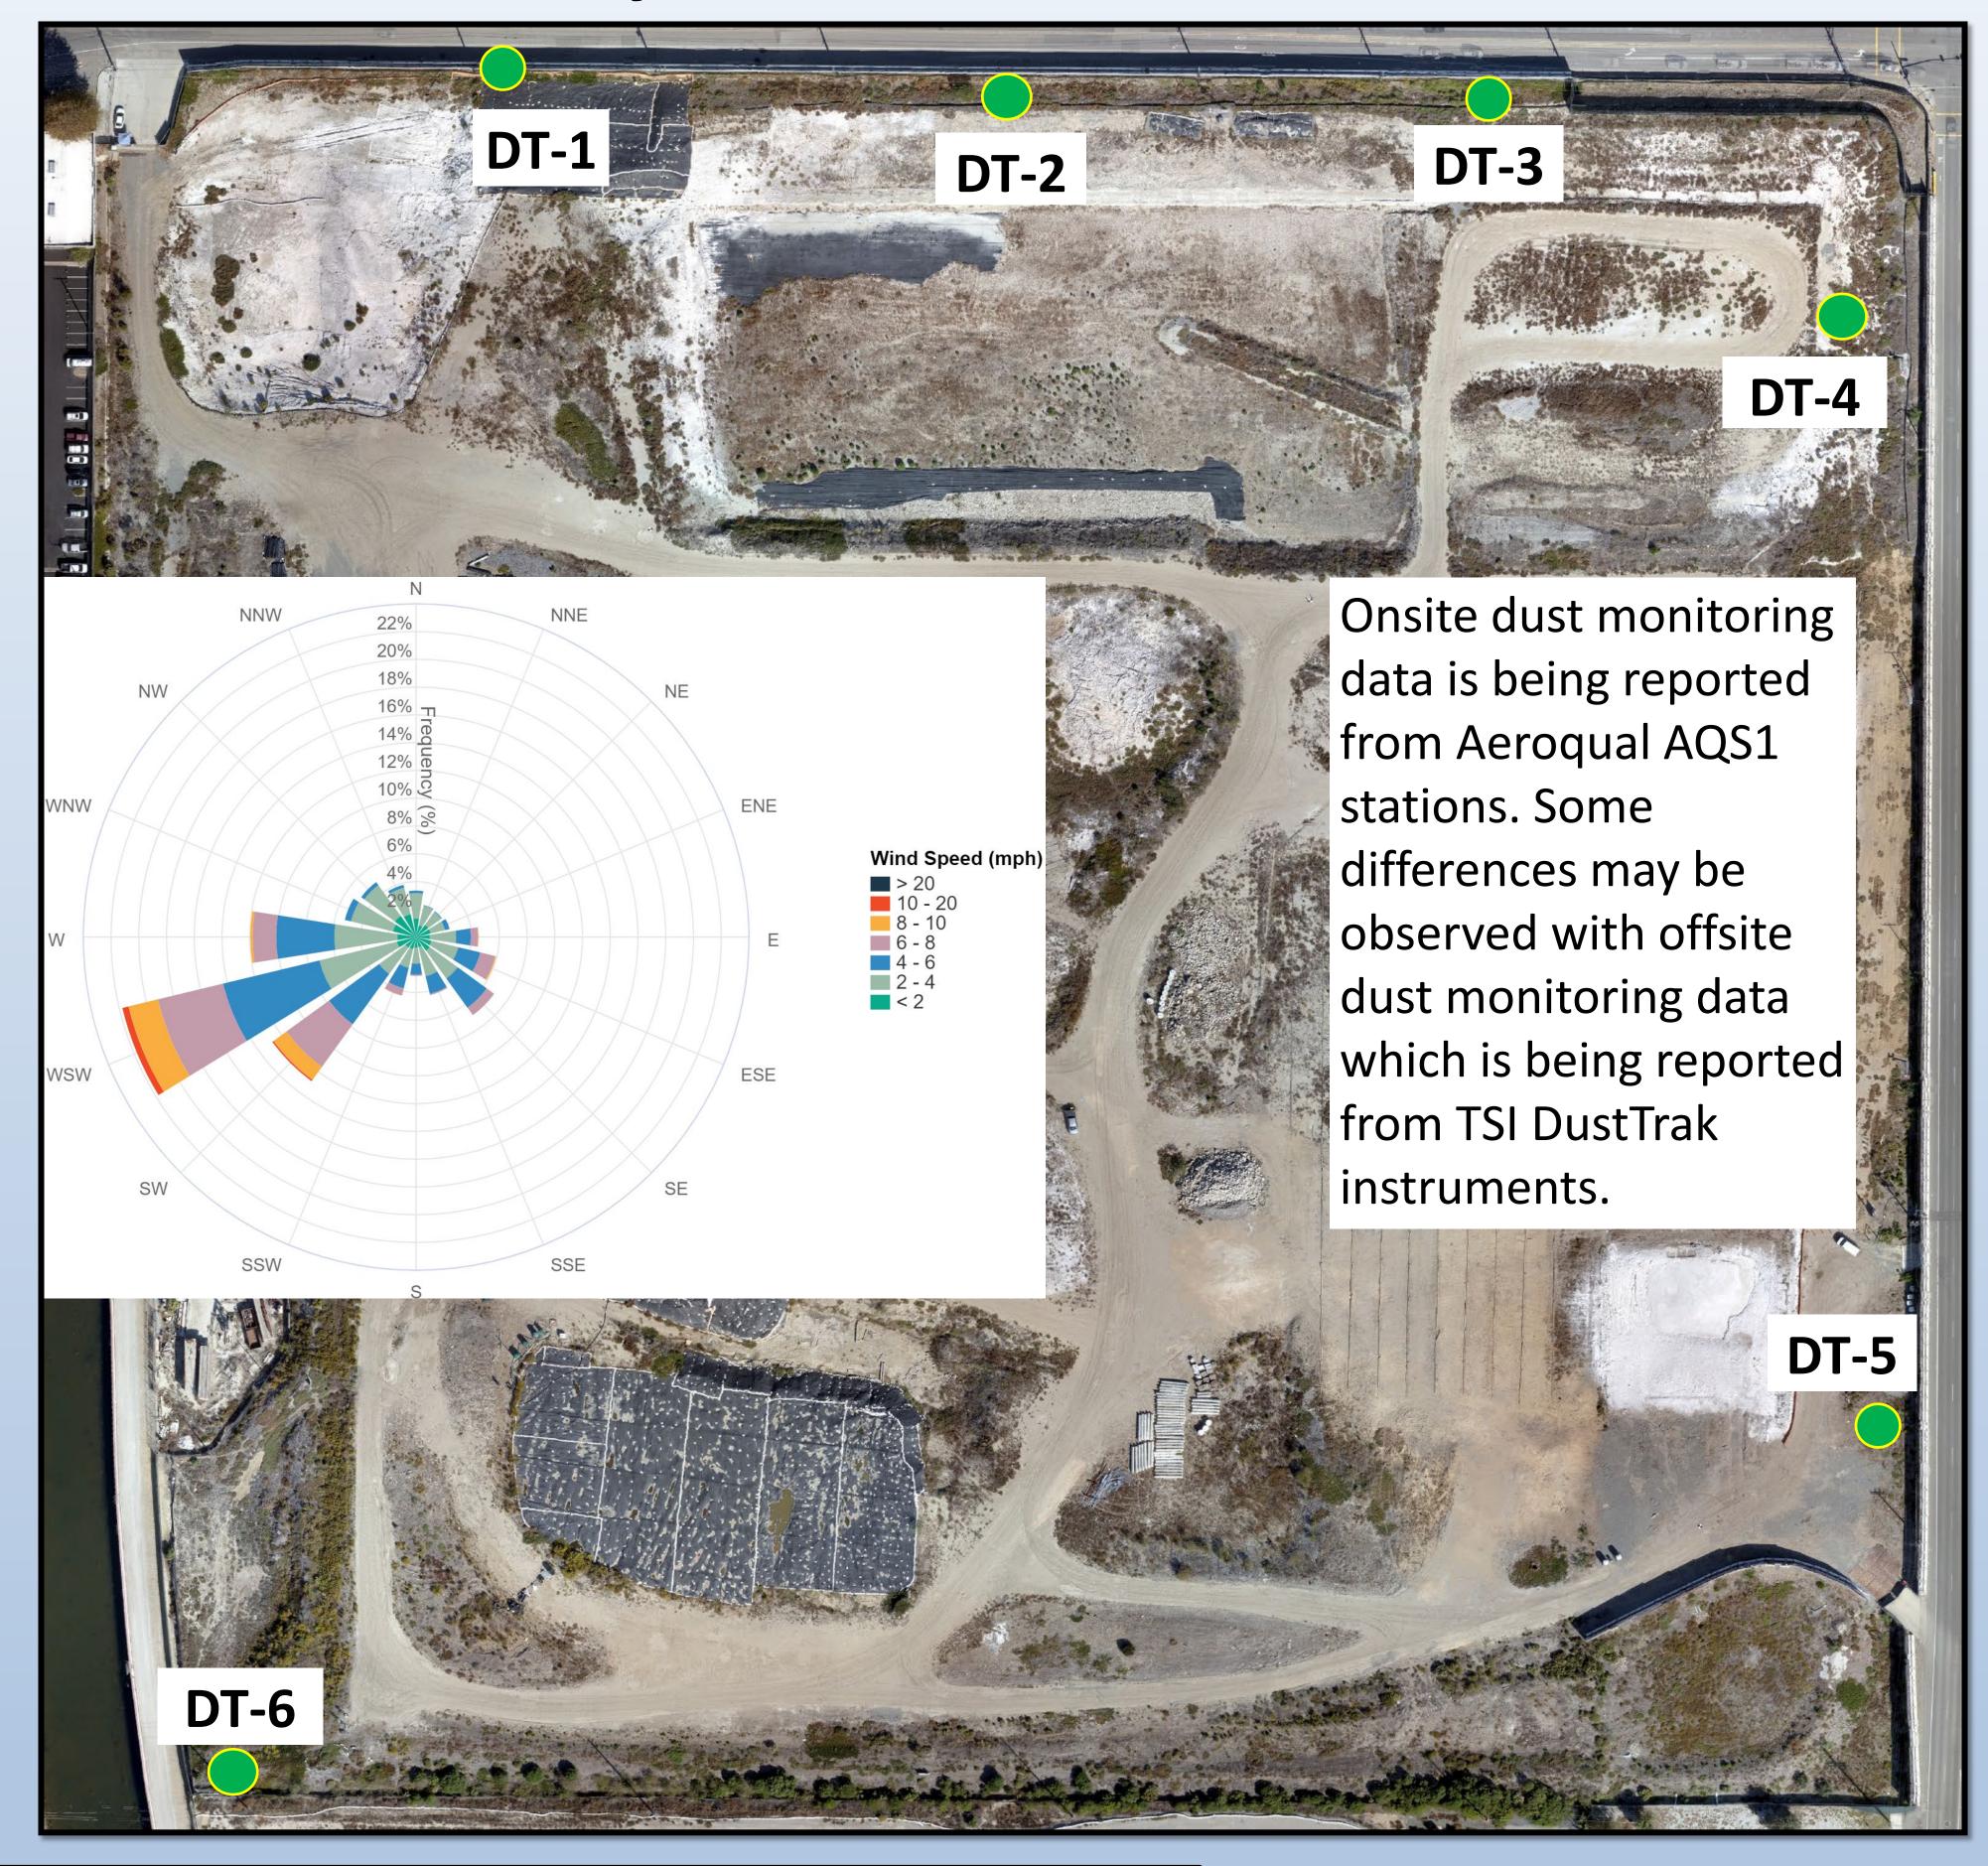

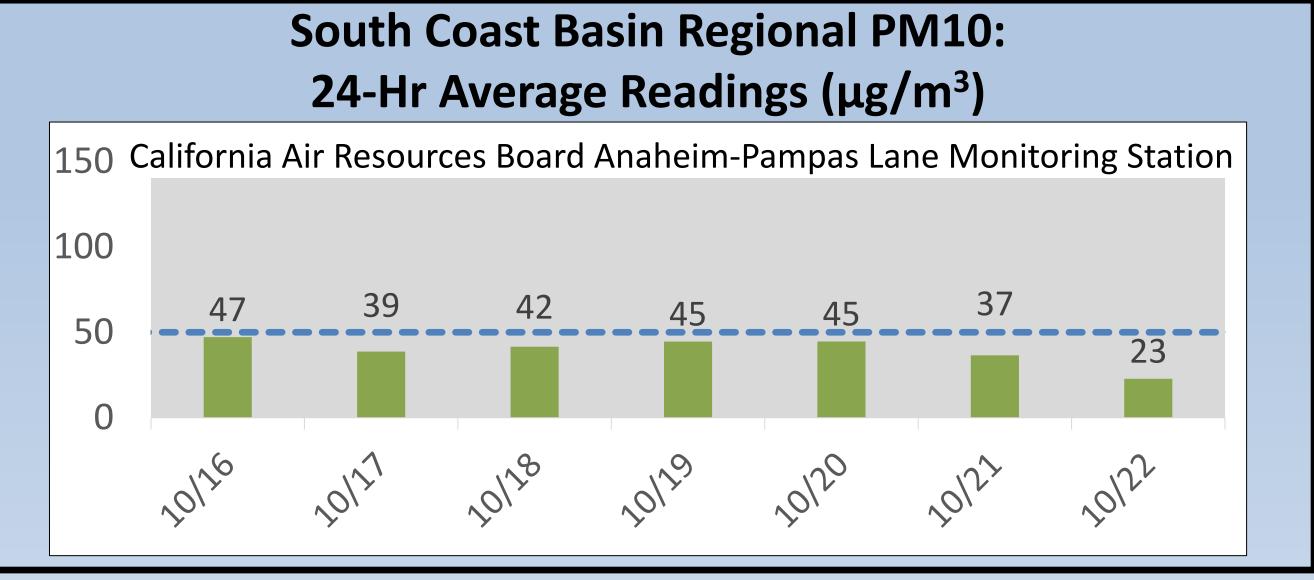

Notes: California Ambient Air Quality Standard for PM10 averaged over 24 hours is $50 \, \mu g/m^3$. National Ambient Air Quality Standard for PM10 averaged over 24 hours is $150 \, \mu g/m^3$.

Onsite Dust Monitoring

Total dust readings including upwind dust contribution Weekly – 10/16/2023 – 10/22/2023

Closest regional station provided for comparison to regional trends

24-hour average concentrations were below air quality standards. Winds were blowing primarily from the west/southwest, with stronger winds in the 10-20 mph range. DT-2 was offline from Oct. 16-18. DTSC approved an offsite air monitoring pause until restart work.
