

Onsite Dust Monitoring

12/18/2023 – 12/24/2023

Net Dust (All Downwind Stations)

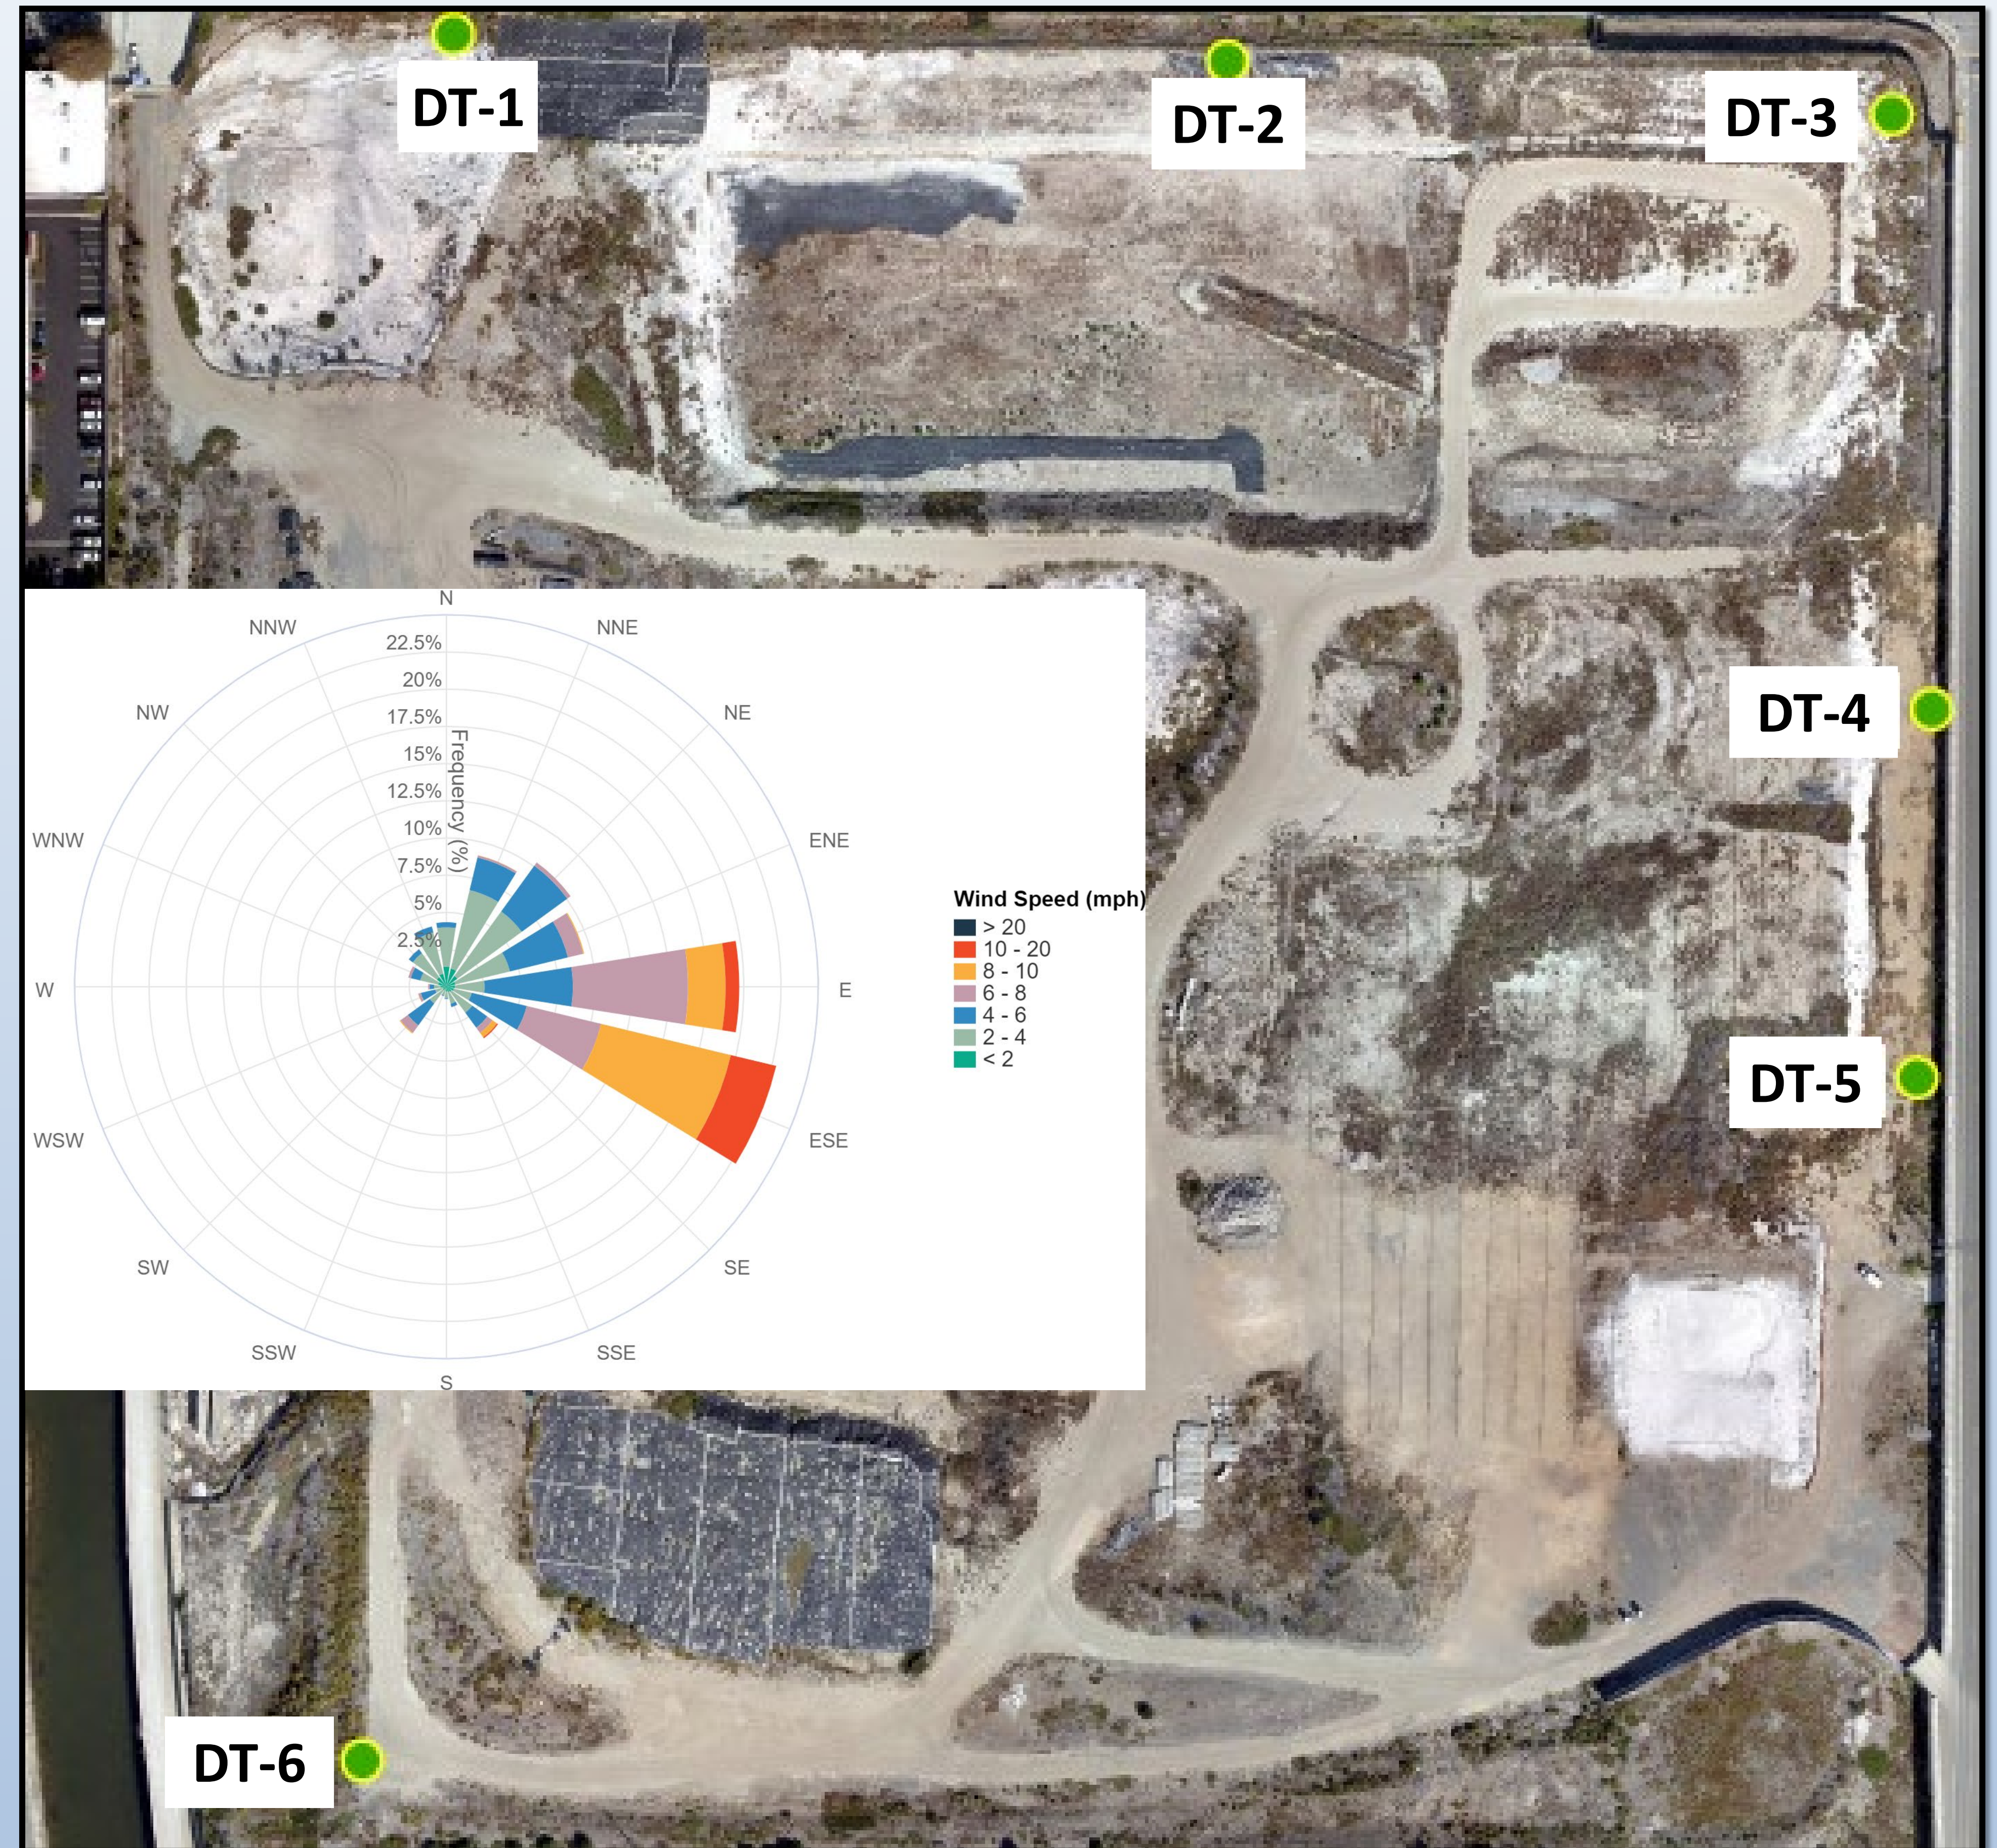

Net dust readings are not above the SCAQMD Dust Limit of $25 \mu\text{g}/\text{m}^3$ indicating that the Site is not contributing to elevated dust readings offsite.

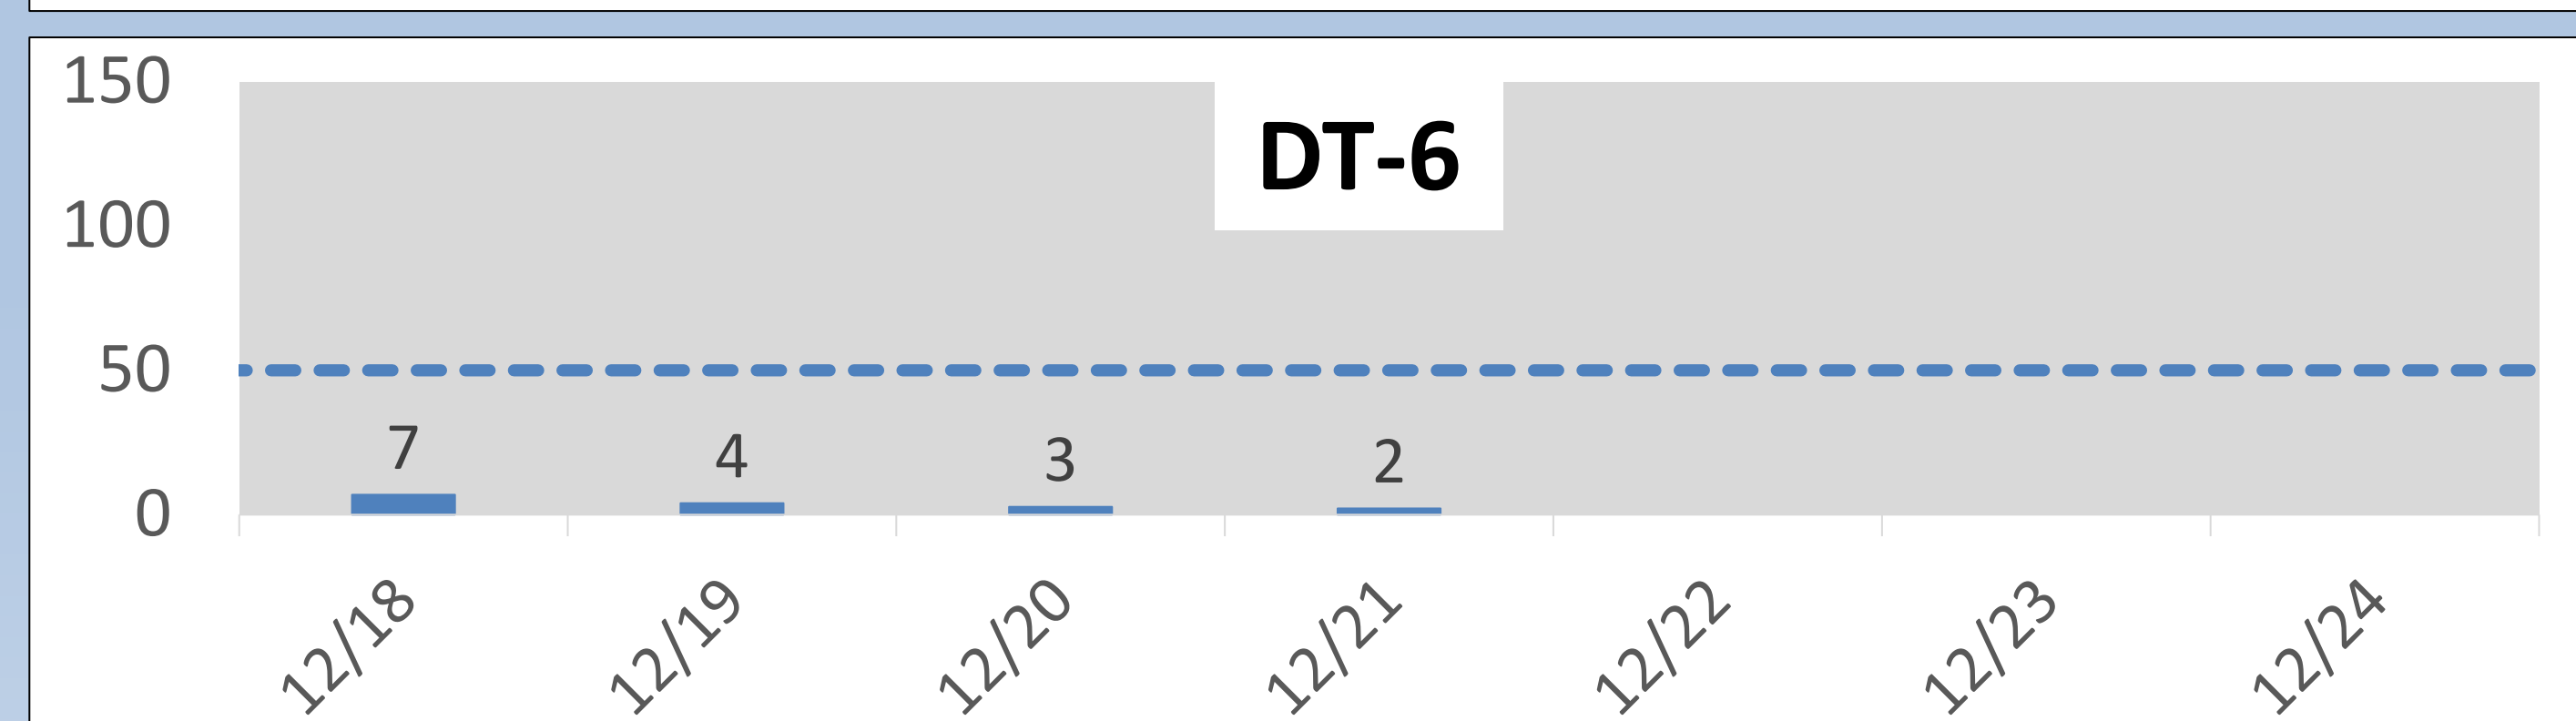

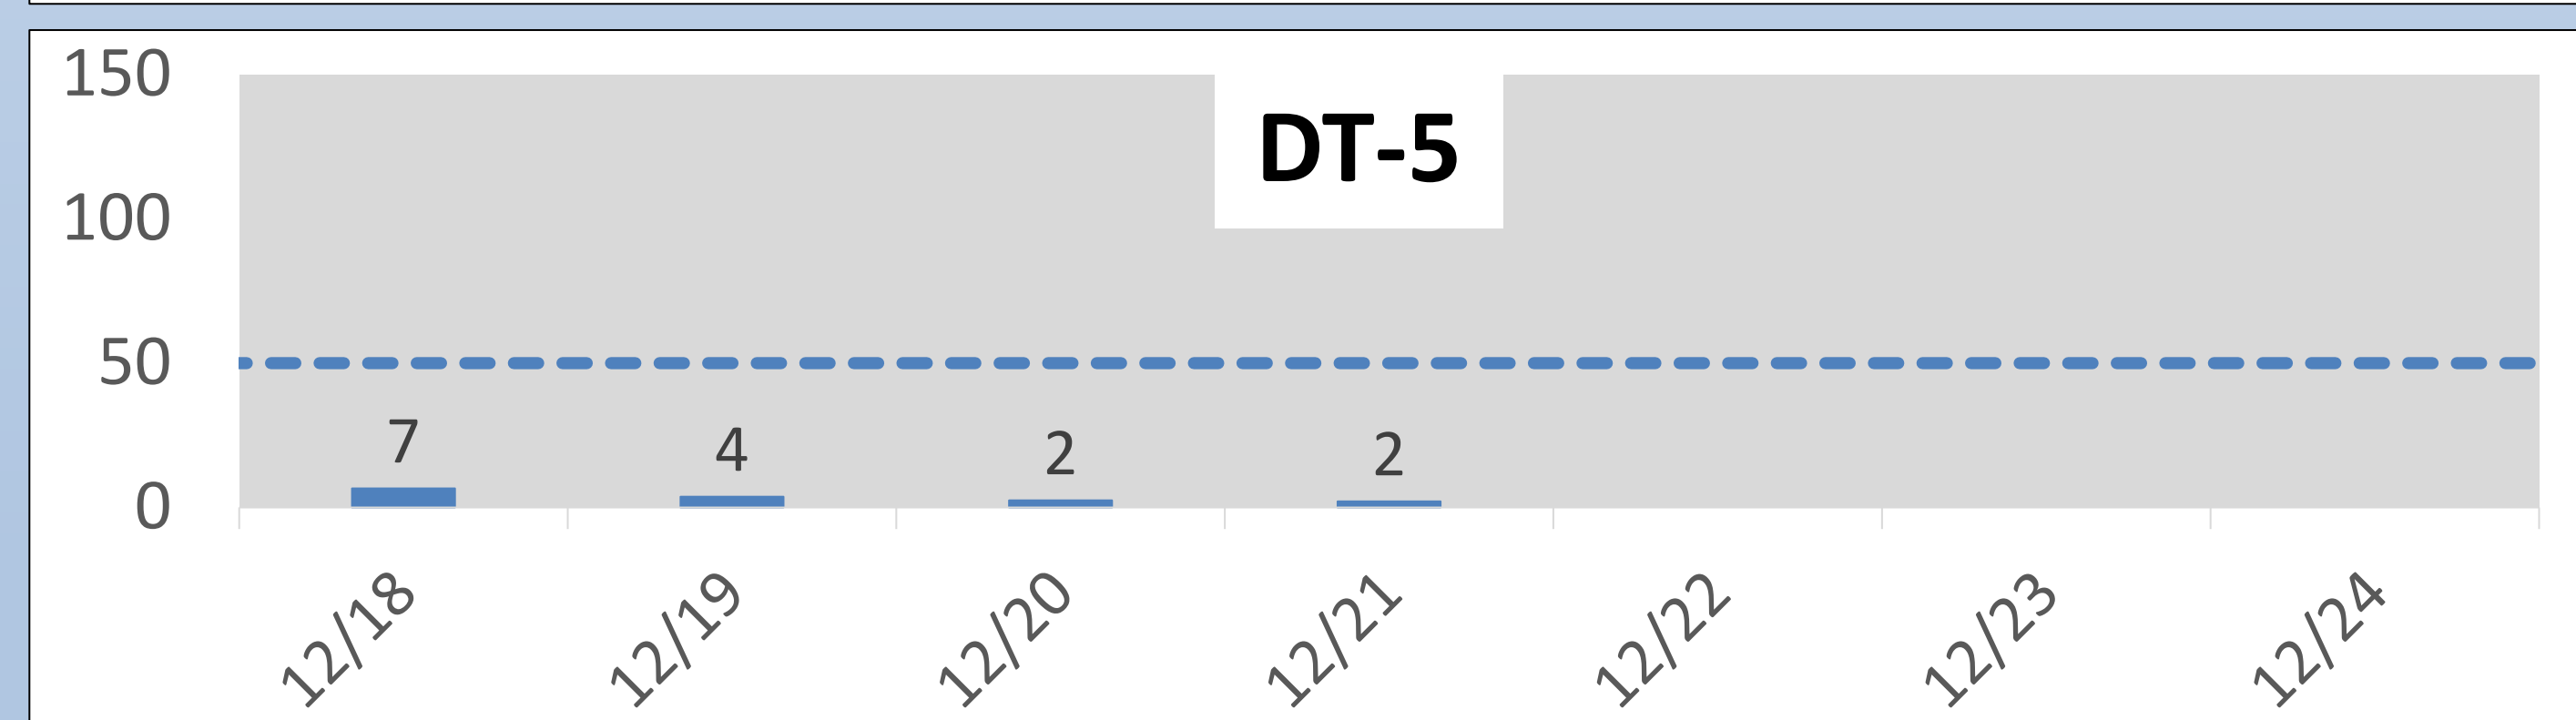

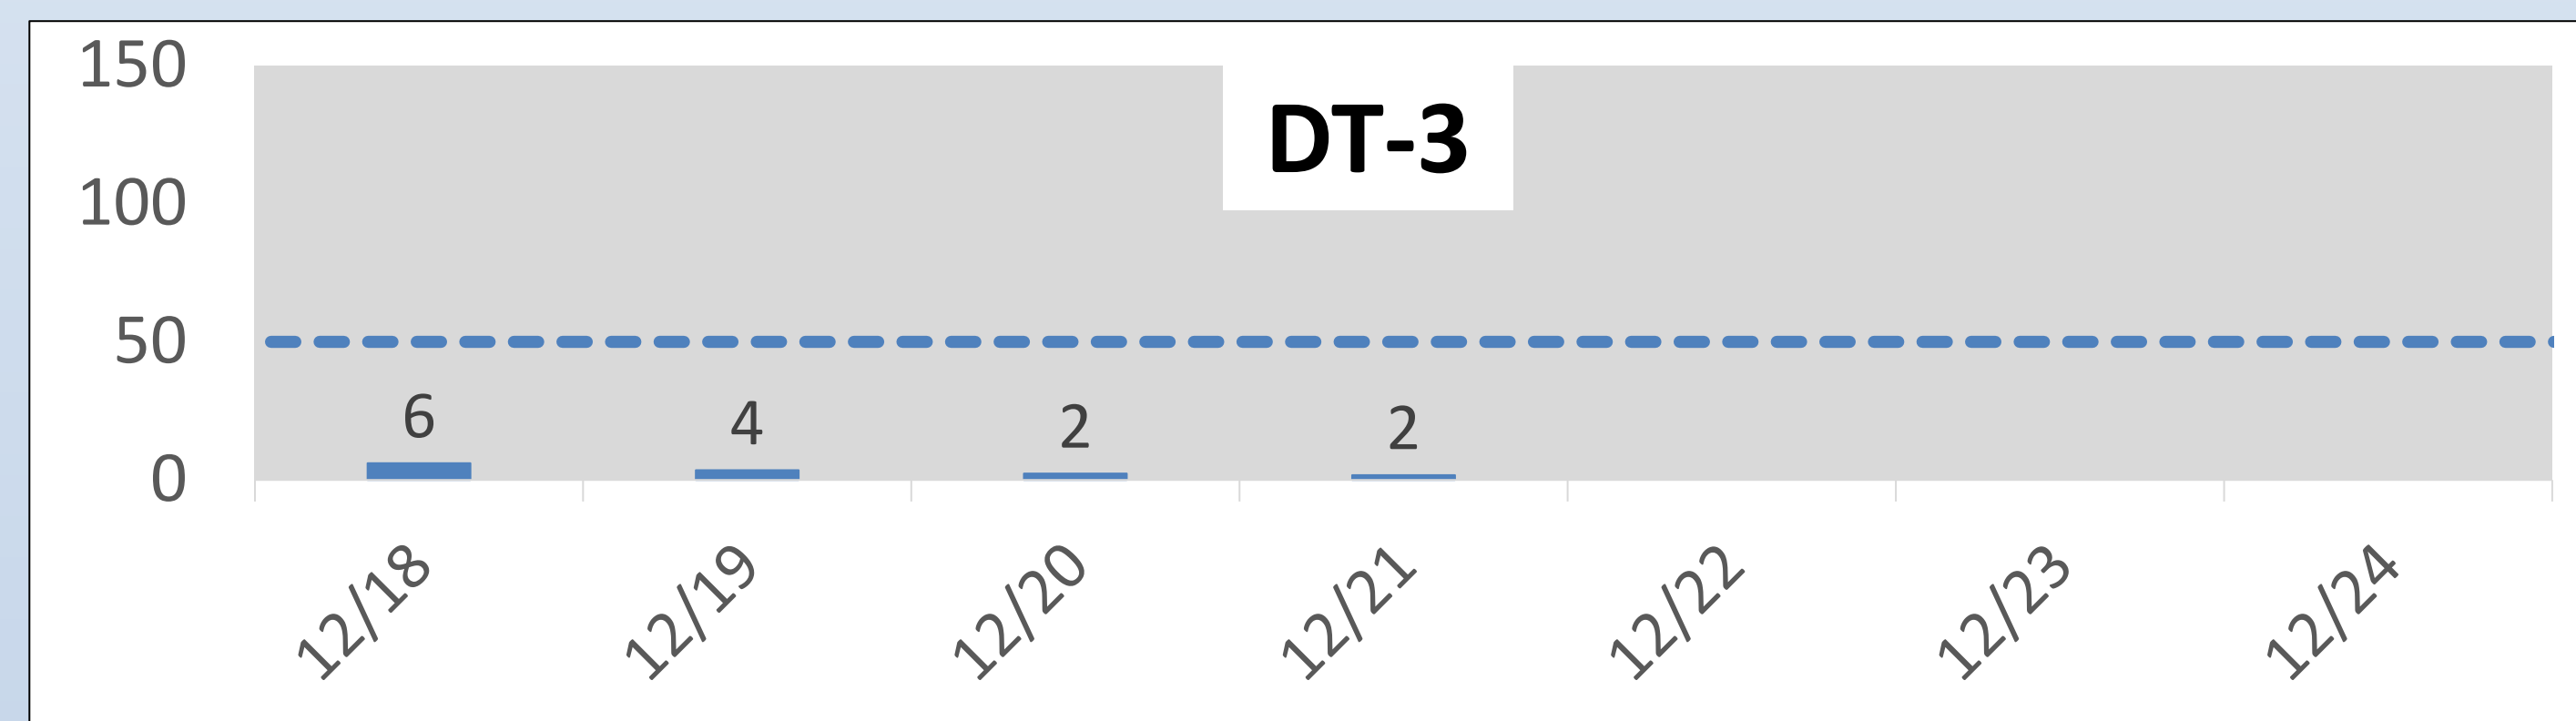

Net dust represents the dust that may be leaving the Site. This is determined by subtracting upwind data (dust blowing onto the Site from other sources) from downwind data. This helps us monitor that dust control actions are effective. No data was recorded over the winter holidays (December 22 to January 1).

Onsite Dust Monitoring

Total dust readings including upwind dust contribution Weekly – 12/18/2023 – 12/24/2023

**Individual Onsite Stations:
24-Hr Average Dust Readings ($\mu\text{g}/\text{m}^3$)**

Notes: California Ambient Air Quality Standard for PM₁₀ averaged over 24 hours is 50 $\mu\text{g}/\text{m}^3$. National Ambient Air Quality Standard for PM₁₀ averaged over 24 hours is 150 $\mu\text{g}/\text{m}^3$.

**South Coast Basin Regional PM₁₀:
24-Hr Average Readings ($\mu\text{g}/\text{m}^3$)**

Closest regional station provided for comparison to regional trends

24-hour average concentrations were below air quality standards. Winds were blowing primarily from the east/southeast, with stronger winds in the 10-20 mph range. No data was recorded over the winter holidays (December 22 to January 1).
