

ASCON LANDFILL SITE

NORTH BERM REPAIR STATUS: DEMOBILIZATION PHASE

DESCRIPTION OF WORK COMPLETED AS OF END OF DAY MAY 13:

Large equipment used for the North Berm repair was removed from the Site. Installation of reinforced polyethylene geomembrane on the excavated surface of the North Berm was completed on Wednesday. A long-term Posi-Shell® cover was applied to the excavated slope of the North Berm on May 8, creating a hardened stucco-like surface. DTSC will be onsite during the week of May 11-15 to observe the final phase of the North Berm repair work.

Work planned for Thursday, May 14: Installation of reinforced polyethylene geomembrane in a treatment zone in the interior of Ascon. Installation of stormwater controls, such as sandbags and silt barriers, at the North Berm. Large equipment used for the North Berm repair may be removed from the Site.

ESTIMATED REMAINING DAYS TO COMPLETE EXCAVATION OF BERM: The excavation phase was completed on May 8. The demobilization phase began May 11 and is expected to take at least one week, through the week of May 18.

PERSONNEL ONSITE: Approximately 20 people are mobilized during the demobilization phase. Personnel undergo a health and safety screening upon arrival every day, following additional protocols for COVID-19. Each day starts with a mandatory safety briefing and job safety analysis (JSA) review.

EQUIPMENT ONSITE: During the demobilization phase, equipment used to conduct the North Berm repair will be cleaned and pressure-washed, and then removed from the Site. It is expected the majority of equipment will be removed through the Hamilton Avenue gate. The equipment includes: two excavators, dump truck, skid steer, water truck. Additional supplies that may be brought on Site during this phase may include sand or gravel bags for stormwater management.

AIR MONITORING CONDUCTED:

WORK ZONE ✓

LANDFILL PERIMETER ✓

OFFSITE COMMUNITY MONITORING ✓

DUST AND ODOR MITIGATION: No scents are added to odor suppressant products by the Ascon team.

Rusmar® Foam ✓ Water ✓ Posi-Shell® ✓ CupriDyne® ✓ Reinforced polyethylene geomembrane ✓
